

**Amended and restated pricing supplement\***

To prospectus dated April 5, 2018,  
prospectus supplement dated April 5, 2018 and  
product supplement no. 2-1 dated April 5, 2018

Registration Statement Nos. 333-222672 and 333-222672-01

Dated October 1, 2018

Rule 424(b)(8)

**JPMorgan Chase Financial Company LLC**Structured  
Investments**\$1,000,000**

**Notes Linked to the Performance of the Indian Rupee Relative to the U.S. Dollar due September 25, 2020**  
Fully and Unconditionally Guaranteed by JPMorgan Chase & Co.

**General**

- The notes are designed for investors who seek capped exposure to any appreciation of the Indian rupee relative to the U.S. dollar from the Strike Rate to the Ending Spot Rate.
- Investors should be willing to forgo interest payments, while seeking payment of their principal in full at maturity.
- The notes are unsecured and unsubordinated obligations of JPMorgan Chase Financial Company LLC, which we refer to as JPMorgan Financial, the payment on which is fully and unconditionally guaranteed by JPMorgan Chase & Co. **Any payment on the notes is subject to the credit risk of JPMorgan Financial, as issuer of the notes, and the credit risk of JPMorgan Chase & Co., as guarantor of the notes.**
- Minimum denominations of \$10,000 and integral multiples of \$1,000 in excess thereof

**Key Terms**

Issuer:	JPMorgan Chase Financial Company LLC, an indirect, wholly owned finance subsidiary of JPMorgan Chase & Co.
Guarantor:	JPMorgan Chase & Co.
Reference Currency:	Indian rupee (INR)
Base Currency:	U.S. dollar (USD)
Payment at Maturity:	At maturity, you will receive a cash payment, for each \$1,000 principal amount note, of \$1,000 <i>plus</i> the Additional Amount, which may be zero and will not be greater than the effective cap of \$3,200 per \$1,000 principal amount note. <b>You are entitled to repayment of principal in full at maturity, subject to the credit risks of JPMorgan Financial and JPMorgan Chase &amp; Co.</b> <i>Because of the effective cap on the Reference Currency Return of 100%, the maximum payment at maturity is \$4,200 per \$1,000 principal amount note.</i>
Additional Amount:	The Additional Amount per \$1,000 principal amount note payable at maturity will equal \$1,000 × the Reference Currency Return × the Participation Rate, <i>provided</i> that the Additional Amount will not be less than zero or greater than the effective cap of \$3,200 per \$1,000 principal amount note.
Participation Rate:	320%
Reference Currency Return:	$\frac{\text{Strike Rate} - \text{Ending Spot Rate}}{\text{Strike Rate}}$ <i>The Reference Currency Return is effectively capped at 100%. Please see "How Do Exchange Rates Work?", "Selected Risk Considerations — Your Notes Are Subject to an Embedded Maximum Payment at Maturity" and "Selected Risk Considerations — The Method of Calculating the Reference Currency Return Will Diminish Any Appreciation of the Reference Currency Relative to the Base Currency" in this pricing supplement for more information.</i>
Strike Rate:	71.8530, which is an exchange rate of the Indian rupee relative to the U.S. dollar, expressed as a number of Indian rupees per one U.S. dollar, determined by reference to certain intraday exchange rates of the Indian rupee relative to the U.S. dollar on the Pricing Date. The Strike Rate is not determined by reference to the Spot Rate on the Pricing Date. Although the calculation agent has made all determinations and has taken all actions in relation to the establishment of the Strike Rate in good faith, it should be noted that such discretion could have an impact (positive or negative), on the value of your notes. The calculation agent is under no obligation to consider your interests as a holder of the notes in taking any actions, including the determination of the Strike Rate, that might affect the value of your notes.
Ending Spot Rate:	The Spot Rate on the Observation Date
Pricing Date:	September 20, 2018
Original Issue Date:	On or about September 25, 2018 (Settlement Date)
Observation Date <sup>†</sup> :	September 22, 2020
Maturity Date <sup>†</sup> :	September 25, 2020
CUSIP:	48130UNX9
Other Key Terms	See "Additional Key Terms" in this pricing supplement.

<sup>†</sup> Subject to postponement in the event of certain market disruption events and as described under "General Terms of Notes — Postponement of a Determination Date — Notes Linked to a Single Underlying — Notes Linked to a Single Reference Currency Relative to a Single Base Currency" and "General Terms of Notes — Postponement of a Payment Date" in the accompanying product supplement

**Investing in the notes involves a number of risks. See "Risk Factors" beginning on page PS-9 of the accompanying product supplement and "Selected Risk Considerations" beginning on page PS-5 of this pricing supplement.**

Neither the Securities and Exchange Commission (the "SEC") nor any state securities commission has approved or disapproved of the notes or passed upon the accuracy or the adequacy of this pricing supplement or the accompanying product supplement, prospectus supplement and prospectus. Any representation to the contrary is a criminal offense.

	Price to Public (1)	Fees and Commissions (2)	Proceeds to Issuer
<b>Per note</b>	\$1,000	\$15	\$985
<b>Total</b>	\$1,000,000	\$15,000	\$985,000

(1) See "Supplemental Use of Proceeds" in this pricing supplement for information about the components of the price to public of the notes.

(2) J.P. Morgan Securities LLC, which we refer to as JPMS, acting as agent for JPMorgan Financial, will pay all of the selling commissions of \$10.00 per \$1,000 principal amount note it receives from us to other affiliated or unaffiliated dealers. See "Plan of Distribution (Conflicts of Interest)" in the accompanying product supplement

**The estimated value of the notes, when the terms of the notes were set, was \$974.40 per \$1,000 principal amount note.** See "The Estimated Value of the Notes" in this pricing supplement for additional information.

*The notes are not bank deposits, are not insured by the Federal Deposit Insurance Corporation or any other governmental agency and are not obligations of, or guaranteed by, a bank.*

\* This pricing supplement amends and restates and supersedes the original pricing supplement related hereto dated September 20, 2018 to product supplement no. 2-1 in its entirety (the original preliminary pricing supplement is available on the SEC website at [http://www.sec.gov/Archives/edgar/data/19617/000089109218006828/e2254\\_424b2.htm](http://www.sec.gov/Archives/edgar/data/19617/000089109218006828/e2254_424b2.htm)).

J.P.Morgan

## Additional Terms Specific to the Notes

You should read this pricing supplement together with the accompanying prospectus, as supplemented by the accompanying prospectus supplement relating to our Series A medium-term notes, of which these notes are a part, and the more detailed information contained in the accompanying product supplement. **This pricing supplement, together with the documents listed below, contains the terms of the notes and supersedes all other prior or contemporaneous oral statements as well as any other written materials including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, fact sheets, brochures or other educational materials of ours. This pricing supplement amends and restates and supersedes the original pricing supplement related hereto dated September 20, 2018 in its entirety. You should not rely on the original pricing supplement related hereto dated September 20, 2018 in making your decision to invest in the notes.** You should carefully consider, among other things, the matters set forth in the “Risk Factors” section of the accompanying product supplement, as the notes involve risks not associated with conventional debt securities. We urge you to consult your investment, legal, tax, accounting and other advisers before you invest in the notes.

You may access these documents on the SEC website at [www.sec.gov](http://www.sec.gov) as follows (or if such address has changed, by reviewing our filings for the relevant date on the SEC website):

- Product supplement no. 2-I dated April 5, 2018:  
[http://www.sec.gov/Archives/edgar/data/19617/000095010318004517/dp87531\\_424b2-ps2i.pdf](http://www.sec.gov/Archives/edgar/data/19617/000095010318004517/dp87531_424b2-ps2i.pdf)
- Prospectus supplement and prospectus, each dated April 5, 2018:  
[http://www.sec.gov/Archives/edgar/data/19617/000095010318004508/dp87767\\_424b2-ps.pdf](http://www.sec.gov/Archives/edgar/data/19617/000095010318004508/dp87767_424b2-ps.pdf)

Our Central Index Key, or CIK, on the SEC website is 1665650, and JPMorgan Chase & Co.’s CIK is 19617. As used in this pricing supplement, “we,” “us” and “our” refer to JPMorgan Financial.

## Additional Key Terms

• **CURRENCY BUSINESS DAY** — A “currency business day,” with respect to the Reference Currency relative to the Base Currency, means a day, as determined by the calculation agent, on which (a) dealings in foreign currency in accordance with the practice of the foreign exchange market occur in the City of New York and the principal financial center for the Reference Currency (which is Mumbai, India) and (b) banking institutions in the City of New York and that principal financial center are not otherwise authorized or required by law, regulation or executive order to close.

• **SPOT RATE** — The Spot Rate on any relevant day is expressed as a number of Indian rupees per one U.S. dollar and is equal to the Indian rupees per one U.S. dollar exchange rate as reported by Thomson Reuters Corporation (“Reuters”) on page RBIB (offer rate) (or any successor page) at approximately 12:30 p.m., Mumbai time, on that day.

## How Do Exchange Rates Work?

Exchange rates reflect the amount of one currency that can be exchanged for a unit of another currency.

The Reference Currency Return reflects the return of the Indian rupee relative to the U.S. dollar from the Strike Rate to the Ending Spot Rate, calculated using the formula set forth above under “Key Terms — Reference Currency Return.” While the Reference Currency Return for purposes of the notes is determined using the formula set forth above under “Key Terms — Reference Currency Return,” there are other reasonable ways to determine the return of the Indian rupee relative to the U.S. dollar that would provide different results. For example, another way to calculate the return of the Indian rupee relative to the U.S. dollar would be to calculate the return that would be achieved by converting U.S. dollars into Indian rupees at the Strike Rate on the Pricing Date and then, on the Observation Date, converting back into U.S. dollars at the Ending Spot Rate. In this pricing supplement, we refer to the return of the Indian rupee relative to the U.S. dollar calculated using that method, which is not used for purposes of the notes, as a “conversion return.”

As demonstrated by the examples below, under the Reference Currency Return formula, any appreciation of the Indian rupee relative to the U.S. dollar will be diminished, as compared to a conversion return. In addition, the diminishing effect on any appreciation of the Indian rupee relative to the U.S. dollar increases as the Reference Currency Return increases. Accordingly, your return on the notes may be less than if you had invested in similar notes that reflected conversion returns.

The Spot Rate is expressed as the number of Indian rupees per one U.S. dollar. As a result, a **decrease** in the Spot Rate from the Strike Rate to the Ending Spot Rate means that the Indian rupee has **appreciated / strengthened** relative to the U.S. dollar from the Strike Rate to the Ending Spot Rate. This means that one Indian rupee could purchase more U.S. dollars at the Ending Spot Rate on the Observation Date than it could on the Pricing Date. Viewed another way, it would take fewer Indian rupees to purchase one U.S. dollar at the Ending Spot Rate on the Observation Date than it did at the Strike Rate on the Pricing Date.

The following examples assume a Strike Rate of 70 for the Indian rupee relative to the U.S. dollar.

### **Example 1: The Indian rupee strengthens from the Strike Rate of 70 Indian rupees per U.S. dollar to the Ending Spot Rate of 66.50 Indian rupees per U.S. dollar.**

The Reference Currency Return is equal to 5.00%, calculated as follows:

$$(70 - 66.50) / 70 = 5.00\%$$

By contrast, if the return on the Indian rupee were determined using a conversion return, the return would be 5.26%.

### **Example 2: The Indian rupee strengthens from the Strike Rate of 70 Indian rupees per U.S. dollar to the Ending Spot Rate of 0.70 Indian rupees per U.S. dollar.**

The Reference Currency Return is equal to 99.00%, calculated as follows:

$$(70 - 0.70) / 70 = 99.00\%$$

By contrast, if the return on the Indian rupee were determined using a conversion return, which would not be subject to the effective cap of 100%, the return would be 9,900%.

As Examples 1 and 2 above demonstrate, the diminishing effect on any appreciation of the Indian rupee relative to the U.S. dollar increases as the Reference Currency Return increases.

Conversely, an **increase** in the Spot Rate from the Strike Rate to the Ending Spot Rate means that the Indian rupee has **depreciated / weakened** relative to the U.S. dollar from the Strike Rate to the Ending Spot Rate. This means that it would take more Indian rupees to purchase one U.S. dollar at the Ending Spot Rate on the Observation Date than it did on the Pricing Date. Viewed another way, one Indian rupee could purchase fewer U.S. dollars at the Ending Spot Rate on the Observation Date than it could at the Strike Rate on the Pricing Date.

### **Example 3: The Indian rupee weakens from the Strike Rate of 70 Indian rupees per U.S. dollar to the Ending Spot Rate of 77 Indian rupees per U.S. dollar.**

The Reference Currency Return is equal to -10.00%, calculated as follows:

$$(70 - 77) / 70 = -10.00\%$$

The hypothetical Strike Rate, Ending Spot Rates and Reference Currency Returns set forth above are for illustrative purposes only and have been rounded for ease of analysis.

## What Is the Total Return on the Notes at Maturity, Assuming a Range of Performances for the Reference Currency Relative to the Base Currency?

The following table and examples illustrate the hypothetical total return at maturity on the notes. The “total return” as used in this pricing supplement is the number, expressed as a percentage, that results from comparing the payment at maturity per \$1,000 principal amount note to \$1,000. Each hypothetical total return set forth below assumes a Strike Rate of 70 and reflects the Participation Rate of 320%. The actual Participation Rate will be provided in the pricing supplement and will not be less than 320%. Each hypothetical total return or hypothetical payment at maturity set forth below is for illustrative purposes only and may not be the actual total return or payment at maturity applicable to a purchaser of the notes. The numbers appearing in the following table and examples have been rounded for ease of analysis.

Ending Spot Rate	Reference Currency Return	Reference Currency Return × Participation Rate (320%)	Additional Amount			Payment at Maturity	Total Return
0.00	100.00%	320.00%	\$3,200.00	+	\$1,000.00	= \$4,200.00	320.00%
14.00	80.00%	256.00%	\$2,560.00	+	\$1,000.00	= \$3,560.00	256.00%
28.00	60.00%	192.00%	\$1,920.00	+	\$1,000.00	= \$2,920.00	192.00%
42.00	40.00%	128.00%	\$1,280.00	+	\$1,000.00	= \$2,280.00	128.00%
56.00	20.00%	64.00%	\$640.00	+	\$1,000.00	= \$1,640.00	64.00%
63.00	10.00%	32.00%	\$320.00	+	\$1,000.00	= \$1,320.00	32.00%
66.50	5.00%	16.00%	\$160.00	+	\$1,000.00	= \$1,160.00	16.00%
<b>70.00</b>	<b>0.00%</b>	<b>0.00%</b>	<b>\$0.00</b>	<b>+</b>	<b>\$1,000.00</b>	<b>= \$1,000.00</b>	<b>0.00%</b>
73.50	-5.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
77.00	-10.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
84.00	-20.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
98.00	-40.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
112.00	-60.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
126.00	-80.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%
140.00	-100.00%	N/A	\$0.00	+	\$1,000.00	= \$1,000.00	0.00%

### Hypothetical Examples of Amount Payable at Maturity

The following examples illustrate how the payment at maturity in different hypothetical scenarios is calculated.

#### Example 1: The Reference Currency appreciates from the Strike Rate of 70 to an Ending Spot Rate of 66.50.

Because the Ending Spot Rate of 66.50 is less than the Strike Rate of 70 and the Reference Currency Return is 5%, the Additional Amount is equal to \$160. The investor receives a payment at maturity of \$1,160 per \$1,000 principal amount note, calculated as follows:

$$\$1,000 + (\$1,000 \times 5\% \times 320\%) = \$1,160$$

#### Example 2: The Reference Currency depreciates from the Strike Rate of 70 to an Ending Spot Rate of 84.

Because the Ending Spot Rate of 84 is greater than the Strike Rate of 70, the Additional Amount is equal to \$0 and the payment at maturity is equal to \$1,000 per \$1,000 principal amount note.

#### Example 3: The Ending Spot Rate is 70.00 and the Reference Currency neither appreciates nor depreciates from the Strike Rate of 70.

Because the Ending Spot Rate of 70.00 is equal to the Strike Rate of 70, the Additional Amount is equal to \$0 and the payment at maturity is equal to \$1,000 per \$1,000 principal amount note.

The hypothetical returns and hypothetical payments on the notes shown above apply **only if you hold the notes for their entire term**. These hypotheticals do not reflect fees or expenses that would be associated with any sale in the secondary market. If these fees and expenses were included, the hypothetical returns and hypothetical payments shown above would likely be lower.

## Selected Purchase Considerations

**POTENTIAL PRESERVATION OF CAPITAL AT MATURITY** — Subject to the credit risks of JPMorgan Financial and JPMorgan Chase & Co., the payment at maturity will be at least \$1,000 per \$1,000 principal amount note if you hold the notes to maturity, regardless of the performance of the Reference Currency. **Because the notes are unsecured and unsubordinated obligations of JPMorgan Financial and JPMorgan Chase & Co., payment of any amount on the notes is subject to our and JPMorgan Chase & Co.'s ability to pay our and JPMorgan Chase & Co.'s obligations as they become due.**

**CAPPED APPRECIATION POTENTIAL** — At maturity, in addition to the principal amount, for each \$1,000 principal amount note, you will receive a payment equal to \$1,000 × the Reference Currency Return × the Participation Rate of 320%, *provided* that this payment (the “Additional Amount”) will not be less than zero or greater than the effective cap of 320% of the principal amount. Accordingly, the maximum payment at maturity is \$4,200 per \$1,000 principal amount note. See “How Does the Reference Currency Return Formula Work?” and “Selected Risk Considerations — Your Notes Are Subject to an Embedded Maximum Payment at Maturity” in this pricing supplement for more information.

**EXPOSURE TO THE INDIAN RUPEE RELATIVE TO THE U.S. DOLLAR** — The return on the notes is linked to the performance of the Indian rupee, which we refer to as the Reference Currency, relative to the U.S. dollar, which we refer to as the Base Currency, and will vary based on changes in the value of the Indian rupee relative to the U.S. dollar as described under “Key Terms” in this pricing supplement. *Please see “How Do Exchange Rates Work?” and “Selected Risk Considerations — The Method of Calculating the Reference Currency Return Will Diminish Any Appreciation Relative to the Base Currency” in this pricing supplement for more information.*

**TREATMENT AS CONTINGENT PAYMENT DEBT INSTRUMENTS** — You should review carefully the section entitled “Material U.S. Federal Income Tax Consequences,” and in particular the subsection thereof entitled “— Notes Treated as Debt Instruments That Have a Term of More Than One Year,” in the accompanying product supplement no. 2-I. Unlike a traditional debt instrument that provides for periodic payments of interest at a single fixed rate, with respect to which a cash-method investor generally recognizes income only upon receipt of stated interest, we intend to treat the notes for U.S. federal income tax purposes as “contingent payment debt instruments.” Assuming this treatment is respected, as discussed in that subsection, you generally will be required to accrue original issue discount on your notes in each taxable year at the “comparable yield,” as determined by us, although we will not make any payment with respect to the notes until maturity. Upon sale or exchange (including at maturity), you will recognize taxable income or loss equal to the difference between the amount received from the sale or exchange and your adjusted basis in the note, which generally will equal the cost thereof, increased by the amount of original issue discount you have accrued in respect of the note. You generally must treat any income as interest income and any loss as ordinary loss to the extent of previous interest inclusions, and the balance as capital loss. The deductibility of capital losses is subject to limitations. Special rules may apply if the Additional Amount is treated as becoming fixed prior to maturity. You should consult your tax adviser concerning the application of these rules. The discussions herein and in the accompanying product supplement do not address the consequences to taxpayers subject to special tax accounting rules under Section 451(b) of the Code. Purchasers who are not initial purchasers of notes at their issue price should consult their tax advisers with respect to the tax consequences of an investment in notes, including the treatment of the difference, if any, between the basis in their notes and the notes' adjusted issue price.

Legislation commonly referred to as “FATCA” will apply to the payment on your notes at maturity, and may also apply to the gross proceeds of a sale or other disposition of a note prior to maturity. However, under a 2015 IRS notice, this regime will not apply to payments of gross proceeds (other than any amount treated as interest) of a sale or other disposition of a note occurring before January 1, 2019. You should consult your tax adviser regarding the potential application of FATCA to the notes.

The discussions in the preceding paragraphs, when read in combination with the section entitled “Material U.S. Federal Income Tax Consequences” (and in particular the subsection thereof entitled “— Notes Treated as Debt Instruments That Have a Term of More than One Year”) in the accompanying product supplement, constitute the full opinion of Davis Polk & Wardwell LLP regarding the material U.S. federal income tax consequences of owning and disposing of notes.

**COMPARABLE YIELD AND PROJECTED PAYMENT SCHEDULE** — We have determined that the “comparable yield” is an annual rate of 3.13%, compounded semiannually. Based on our determination of the comparable yield, the “projected payment schedule” per \$1,000 principal amount note consists of a single payment at maturity, equal to \$1,064.16. Assuming a semiannual accrual period, the following table sets out the amount of OID that will accrue with respect to a note during each calendar period, based upon our determination of the comparable yield and projected payment schedule.

<b>Calendar Period</b>	<b>Accrued OID During Calendar Period (Per \$1,000 Principal Amount Note)</b>	<b>Total Accrued OID from Original Issue Date (Per \$1,000 Principal Amount Note) as of End of Calendar Period</b>
September 25, 2018 through December 31, 2018.....	\$8.26	\$8.26
January 1, 2019 through December 31, 2019.....	\$31.81	\$40.07
January 1, 2020 through September 25, 2020.....	\$24.09	\$64.16

**Neither the comparable yield nor the projected payment schedule constitutes a representation by us regarding the actual Additional Amount, if any, that we will pay on the notes. The amount you actually receive at maturity or earlier sale or exchange of your notes will affect your income for that year, as described above under “— Treatment as Contingent Payment Debt Instruments.”**

## Selected Risk Considerations

An investment in the notes involves significant risks. Investing in the notes is not equivalent to investing directly in the Indian rupee, the U.S. dollar or the exchange rate between the Indian rupee and U.S. dollar or any contracts related to the Indian rupee, the U.S. dollar or the exchange rate between the Indian rupee and the U.S. dollar. These risks are explained in more detail in the "Risk Factors" section of the accompanying product supplement.

**THE NOTES MAY NOT PAY MORE THAN THE PRINCIPAL AMOUNT AT MATURITY** — You may receive a lower payment at maturity than you would have received if you had invested directly in the Reference Currency, the U.S. dollar or any contracts related to the Reference Currency, the U.S. dollar or the exchange rate between the Reference Currency and the U.S. dollar. If the Reference Currency Return is not positive (*i.e.*, the Reference Currency does not appreciate from the Strike Rate to the Ending Spot Rate), the Additional Amount will be zero. This will be true even if the Reference Currency Return was positive at some time during the term of the notes but depreciates or remains flat from the Starting Reference Currency Spot Rate on the Observation Date.

**YOUR NOTES ARE SUBJECT TO AN EMBEDDED MAXIMUM PAYMENT AT MATURITY** — Because the Reference Currency Return is expressed as the Strike Rate *minus* the Ending Spot Rate, *divided* by the Strike Rate, your payment at maturity is subject to an embedded maximum payment at maturity. In no event will the Reference Currency Return be greater than 100%. As a result, the Additional Amount will not be greater than \$3,200 per \$1,000 principal amount note, and the payment at maturity will not be greater than \$4,200 per \$1,000 principal amount note.

**CREDIT RISKS OF JPMORGAN FINANCIAL AND JPMORGAN CHASE & CO.** — The notes are subject to our and JPMorgan Chase & Co.'s credit risks, and our and JPMorgan Chase & Co.'s credit ratings and credit spreads may adversely affect the market value of the notes. Investors are dependent on our and JPMorgan Chase & Co.'s ability to pay all amounts due on the notes. Any actual or potential change in our or JPMorgan Chase & Co.'s creditworthiness or credit spreads, as determined by the market for taking that credit risk, is likely to adversely affect the value of the notes. If we and JPMorgan Chase & Co. were to default on our payment obligations, you may not receive any amounts owed to you under the notes and you could lose your entire investment.

**AS A FINANCE SUBSIDIARY, JPMORGAN FINANCIAL HAS NO INDEPENDENT OPERATIONS AND HAS LIMITED ASSETS** — As a finance subsidiary of JPMorgan Chase & Co., we have no independent operations beyond the issuance and administration of our securities. Aside from the initial capital contribution from JPMorgan Chase & Co., substantially all of our assets relate to obligations of our affiliates to make payments under loans made by us or other intercompany agreements. As a result, we are dependent upon payments from our affiliates to meet our obligations under the notes. If these affiliates do not make payments to us and we fail to make payments on the notes, you may have to seek payment under the related guarantee by JPMorgan Chase & Co., and that guarantee will rank *pari passu* with all other unsecured and unsubordinated obligations of JPMorgan Chase & Co.

**POTENTIAL CONFLICTS** — We and our affiliates play a variety of roles in connection with the issuance of the notes, including acting as calculation agent and as an agent of the offering of the notes, hedging our obligations under the notes and making the assumptions used to determine the pricing of the notes and the estimated value of the notes when the terms of the notes are set, which we refer to as the estimated value of the notes. In performing these duties, our and JPMorgan Chase & Co.'s economic interests and the economic interests of the calculation agent and other affiliates of ours are potentially adverse to your interests as an investor in the notes. In addition, our and JPMorgan Chase & Co.'s business activities, including hedging and trading activities, could cause our and JPMorgan Chase & Co.'s economic interests to be adverse to yours and could adversely affect any payment on the notes and the value of the notes. It is possible that hedging or trading activities of ours or our affiliates in connection with the notes could result in substantial returns for us or our affiliates while the value of the notes declines. Please refer to "Risk Factors — Risks Relating to Conflicts of Interest" in the accompanying product supplement for additional information about these risks.

In addition, although the calculation agent has made all determinations and has taken all actions in relation to the establishment of the Strike Rate in good faith, it should be noted that such discretion could have an impact (positive or negative), on the value of your notes. The calculation agent is under no obligation to consider your interests as a holder of the notes in taking any actions, including the determination of the Strike Rate, that might affect the value of your notes.

**THE ESTIMATED VALUE OF THE NOTES IS LOWER THAN THE ORIGINAL ISSUE PRICE (PRICE TO PUBLIC) OF THE NOTES** — The estimated value of the notes is only an estimate determined by reference to several factors. The original issue price of the notes exceeds the estimated value of the notes because costs associated with selling, structuring and hedging the notes are included in the original issue price of the notes. These costs include the selling commissions, the projected profits, if any, that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes and the estimated cost of hedging our obligations under the notes. See "The Estimated Value of the Notes" in this pricing supplement.

**THE ESTIMATED VALUE OF THE NOTES DOES NOT REPRESENT FUTURE VALUES OF THE NOTES AND MAY DIFFER FROM OTHERS' ESTIMATES** — The estimated value of the notes is determined by reference to internal pricing models of our affiliates when the terms of the notes are set. This estimated value of the notes is based on market conditions and other relevant factors existing at that time and assumptions about market parameters, which can include volatility, interest rates and other factors. Different pricing models and assumptions could provide valuations for the notes that are greater than or less than the estimated value of the notes. In addition, market conditions and other

relevant factors in the future may change, and any assumptions may prove to be incorrect. On future dates, the value of the notes could change significantly based on, among other things, changes in market conditions, our or JPMorgan Chase & Co.'s creditworthiness, interest rate movements and other relevant factors, which may impact the price, if any, at which JPMS would be willing to buy notes from you in secondary market transactions. See "The Estimated Value of the Notes" in this pricing supplement.

**THE ESTIMATED VALUE OF THE NOTES IS DERIVED BY REFERENCE TO AN INTERNAL FUNDING RATE** — The internal funding rate used in the determination of the estimated value of the notes is based on, among other things, our and our affiliates' view of the funding value of the notes as well as the higher issuance, operational and ongoing liability management costs of the notes in comparison to those costs for the conventional fixed-rate debt of JPMorgan Chase & Co. The use of an internal funding rate and any potential changes to that rate may have an adverse effect on the terms of the notes and any secondary market prices of the notes. See "The Estimated Value of the Notes" in this pricing supplement.

**THE VALUE OF THE NOTES AS PUBLISHED BY JPMS (AND WHICH MAY BE REFLECTED ON CUSTOMER ACCOUNT STATEMENTS) MAY BE HIGHER THAN THE THEN-CURRENT ESTIMATED VALUE OF THE NOTES FOR A LIMITED TIME PERIOD** — We generally expect that some of the costs included in the original issue price of the notes will be partially paid back to you in connection with any repurchases of your notes by JPMS in an amount that will decline to zero over an initial predetermined period. These costs can include projected hedging profits, if any, and, in some circumstances, estimated hedging costs and our internal secondary market funding rates for structured debt issuances. See "Secondary Market Prices of the Notes" in this pricing supplement for additional information relating to this initial period. Accordingly, the estimated value of your notes during this initial period may be lower than the value of the notes as published by JPMS (and which may be shown on your customer account statements).

**SECONDARY MARKET PRICES OF THE NOTES WILL LIKELY BE LOWER THAN THE ORIGINAL ISSUE PRICE OF THE NOTES** — Any secondary market prices of the notes will likely be lower than the original issue price of the notes because, among other things, secondary market prices take into account our internal secondary market funding rates for structured debt issuances and, also, because secondary market prices (a) exclude selling commissions and (b) may exclude projected hedging profits, if any, and estimated hedging costs that are included in the original issue price of the notes. As a result, the price, if any, at which JPMS will be willing to buy notes from you in secondary market transactions, if at all, is likely to be lower than the original issue price. Any sale by you prior to the Maturity Date could result in a substantial loss to you. See the immediately following risk consideration for information about additional factors that will impact any secondary market prices of the notes.

The notes are not designed to be short-term trading instruments. Accordingly, you should be able and willing to hold your notes to maturity. See "— Lack of Liquidity" below.

**SECONDARY MARKET PRICES OF THE NOTES WILL BE IMPACTED BY MANY ECONOMIC AND MARKET FACTORS** — The secondary market price of the notes during their term will be impacted by a number of economic and market factors, which may either offset or magnify each other, aside from the selling commissions, projected hedging profits, if any, estimated hedging costs and the value of the Reference Currency relative to the Base Currency, including:

- any actual or potential change in our and JPMorgan Chase & Co.'s creditworthiness or credit spreads;
- customary bid-ask spreads for similarly sized trades;
- our internal secondary market funding rates for structured debt issuances;
- the exchange rate of the Reference Currency relative to the Base Currency and the volatility of that exchange rate;
- suspension or disruption of market trading in the Reference Currency or the Base Currency;
- the time to maturity of the notes;
- interest and yield rates in the market generally; and
- a variety of other economic, financial, political, regulatory and judicial events.

Additionally, independent pricing vendors and/or third party broker-dealers may publish a price for the notes, which may also be reflected on customer account statements. This price may be different (higher or lower) than the price of the notes, if any, at which JPMS may be willing to purchase your notes in the secondary market.

**THE METHOD OF CALCULATING THE REFERENCE CURRENCY RETURN WILL DIMINISH ANY APPRECIATION OF THE REFERENCE CURRENCY RELATIVE TO THE BASE CURRENCY** — The Reference Currency Return reflects the return of the Indian rupee relative to the U.S. dollar from the Strike Rate to the Ending Spot Rate, calculated using the formula set forth above under "Key Terms — Reference Currency Return." While the Reference Currency Return for purposes of the notes is determined using the formula set forth above under "Key Terms — Reference Currency Return," there are other reasonable ways to determine the return of the Indian rupee relative to the U.S. dollar that would provide different results. For example, another way to calculate the return of the Indian rupee relative to the U.S. dollar would be to calculate the return that would be achieved by converting U.S. dollars into Indian rupees at the Strike Rate on the Pricing Date and then, on the Observation Date, converting back into U.S. dollars at the Ending Spot Rate. In this pricing supplement, we refer to the return on the Indian rupee relative to the U.S. dollar calculated using that method, which is not used for purposes of the notes, as a "conversion return."

Under the Reference Currency Return formula, any appreciation of the Indian rupee relative to the U.S. dollar will be diminished, as compared to a conversion return. In addition, the diminishing effect on any appreciation of the Indian rupee relative to the U.S. dollar increases as the Reference Currency Return increases. Accordingly, your payment at maturity may be less than if you had invested in similar notes that reflected a conversion return. See "How Do Exchange Rates Work?" in this pricing supplement for more information.

**THE NOTES MIGHT NOT PAY AS MUCH AS A DIRECT INVESTMENT IN THE REFERENCE CURRENCY** — You may receive a lower payment at maturity than you would have received if you had invested directly in the Indian rupee or contracts related to the Indian rupee for which there is an active secondary market.

**THE NOTES ARE SUBJECT TO CURRENCY EXCHANGE RISK** — Foreign currency exchange rates vary over time, and may vary considerably during the term of the notes. The value of the Indian rupee or the U.S. dollar is at any moment a result of the supply and demand for that currency. Changes in foreign currency exchange rates result over time from the interaction of many factors directly or indirectly affecting economic and political conditions in India and the United States, and other relevant countries or regions.

Of particular importance to potential currency exchange risk are:

- existing and expected rates of inflation;
- existing and expected interest rate levels;
- the balance of payments in India and the United States, and between each country and its major trading partners;
- political, civil or military unrest in India and the United States; and
- the extent of governmental surplus or deficit in India and the United States.

All of these factors are, in turn, sensitive to the monetary, fiscal and trade policies pursued by India and the United States, and those of other countries important to international trade and finance.

**GOVERNMENTAL INTERVENTION COULD MATERIALLY AND ADVERSELY AFFECT THE VALUE OF THE NOTES** — Foreign exchange rates can be fixed by the sovereign government, allowed to float within a range of exchange rates set by the government or left to float freely. Governments, including those of India and the United States, use a variety of techniques, such as intervention by their central bank or imposition of regulatory controls or taxes, to affect the exchange rates of their respective currencies. They may also issue a new currency to replace an existing currency, fix the exchange rate or alter the exchange rate or relative exchange characteristics by devaluation or revaluation of a currency. Thus, a special risk in purchasing the notes is that their trading value and amount payable could be affected by the actions of sovereign governments, fluctuations in response to other market forces and the movement of currencies across borders.

**BECAUSE THE REFERENCE CURRENCY IS AN EMERGING MARKETS CURRENCY, THE VALUE OF THE NOTES IS SUBJECT TO AN INCREASED RISK OF SIGNIFICANT ADVERSE FLUCTUATIONS** — The notes are linked to the performance of the Indian rupees, which is an emerging markets currency, relative to the U.S. dollar. There is an increased risk of significant adverse fluctuations in the performances of the emerging markets currencies as they are currencies of less developed and less stable economies without a stabilizing component that could be provided by one of the major currencies. As a result, emerging markets currencies may be subject to higher volatility than major currencies, especially in environments of risk aversion and deleveraging. With respect to any emerging or developing nation, there is the possibility of nationalization, expropriation or confiscation, political changes, government regulation and social instability. Currencies of emerging economies are often subject to more frequent and larger central bank interventions than the currencies of developed countries and are also more likely to be affected by drastic changes in monetary or exchange rate policies of the relevant countries, which may negatively affect the value of the notes. Global events, even if not directly applicable to India or its currency, may increase volatility or adversely affect the Reference Currency Return and the value of your notes.

**EVEN THOUGH THE REFERENCE CURRENCY AND THE BASE CURRENCY TRADE AROUND-THE-CLOCK, THE NOTES WILL NOT** — Because the inter-bank market in foreign currencies is a global, around-the-clock market, the hours of trading for the notes, if any, will not conform to the hours during which the Indian rupee and the U.S. dollar are traded. Consequently, significant price and rate movements may take place in the underlying foreign exchange markets that will not be reflected immediately in the price of the notes. Additionally, there is no systematic reporting of last-sale information for foreign currencies which, combined with the limited availability of quotations to individual investors, may make it difficult for many investors to obtain timely and accurate data regarding the state of the underlying foreign exchange markets.

**CURRENCY EXCHANGE RISKS CAN BE EXPECTED TO HEIGHTEN IN PERIODS OF FINANCIAL TURMOIL** — In periods of financial turmoil, capital can move quickly out of regions that are perceived to be more vulnerable to the effects of the crisis than others with sudden and severely adverse consequences to the currencies of those regions. In addition, governments around the world, including the governments of India and the United States and the governments of other major world currencies, have recently made, and may be expected to continue to make, very significant interventions in their economies, and sometimes directly in their currencies. Such interventions affect currency exchange rates globally and, in particular, the value of the Indian rupee relative to the U.S. dollar. Further interventions, other government actions or suspensions of actions, as well as other changes in government economic policy or other financial or economic events affecting the currency markets, may cause currency exchange rates to fluctuate sharply in

the future, which could have a material adverse effect on the value of the notes and your return on your investment in the notes at maturity.

**CURRENCY MARKET DISRUPTIONS MAY ADVERSELY AFFECT YOUR RETURN** — The calculation agent may, in its sole discretion, determine that the currency markets have been affected in a manner that prevents it from properly determining, among other things, the Spot Rate and the Reference Currency Return. These events may include disruptions or suspensions of trading in the currency markets as a whole, and could be a Convertibility Event, a Deliverability Event, a Liquidity Event, a Taxation Event, a Discontinuity Event or a Price Source Disruption Event. See “The Underlyings — Currencies — Market Disruption Events for a Reference Currency Relative to a Base Currency” in the accompanying product supplement for further information on what constitutes a market disruption event.

**NO INTEREST PAYMENTS** — As a holder of the notes, you will not receive interest payments.

**LACK OF LIQUIDITY** — The notes will not be listed on any securities exchange. JPMS intends to offer to purchase the notes in the secondary market but is not required to do so. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the notes easily. Because other dealers are not likely to make a secondary market for the notes, the price at which you may be able to trade your notes is likely to depend on the price, if any, at which JPMS is willing to buy the notes.

## Historical Information

The following graph shows the historical weekly performance of the Spot Rate, determined in the manner set forth under “Additional Key Terms — Spot Rate” in this pricing supplement, from January 4, 2013 through September 28, 2018. The Spot Rate on October 1, 2018 was 72.8036. The Spot Rate on September 20, 2018 was not available due to a local holiday in India. **The Reference Currency Return increases when the Indian rupee appreciates in value against the U.S. dollar.**

We obtained the historical Spot Rates above and below from Reuters, without independent verification. The historical Spot Rates should not be taken as an indication of future performance, and no assurance can be given as to the Spot Rate on the Observation Date. There can be no assurance that the performance of the Indian rupee relative to the U.S. dollar will result in a positive return on the notes at maturity.

## The Estimated Value of the Notes

The estimated value of the notes set forth on the cover of this pricing supplement is equal to the sum of the values of the following hypothetical components: (1) a fixed-income debt component with the same maturity as the notes, valued using the internal funding rate described below, and (2) the derivative or derivatives underlying the economic terms of the notes. The estimated value of the notes does not represent a minimum price at which JPMS would be willing to buy your notes in any secondary market (if any exists) at any time. The internal funding rate used in the determination of the estimated value of the notes is based on, among other things, our and our affiliates' view of the funding value of the notes as well as the higher issuance, operational and ongoing liability management costs of the notes in comparison to those costs for the conventional fixed-rate debt of JPMorgan Chase & Co. For additional information, see “Selected Risk Considerations — The Estimated Value of the Notes Is Derived by Reference to an Internal Funding Rate” in this pricing supplement. The value of the derivative or derivatives underlying the economic terms of the notes is derived from internal pricing models of our affiliates. These models are dependent on inputs such as the traded market prices of comparable derivative instruments and on various other inputs, some of which are market-observable, and which can include volatility, interest rates and other factors, as well as assumptions about future market events and/or environments. Accordingly, the estimated value of the notes is determined when the terms of the notes are set based on market conditions and other relevant factors and assumptions existing at that time. See “Selected Risk Considerations — The Estimated Value of the Notes Does Not Represent Future Values of the Notes and May Differ from Others' Estimates” in this pricing supplement.

The estimated value of the notes is lower than the original issue price of the notes because costs associated with selling, structuring and hedging the notes are included in the original issue price of the notes. These costs include the selling commissions paid to JPMS and other affiliated or unaffiliated dealers, the projected profits, if any, that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes and the estimated cost of hedging our obligations under the notes. Because hedging our obligations entails risk and may be influenced by market forces beyond our control, this hedging may result in a profit that is more or less than expected, or it may result in a loss. We or one or more of our affiliates will retain any profits realized in hedging our obligations under the notes. See “Selected Risk Considerations — The Estimated Value of the Notes Is Lower Than the Original Issue Price (Price to Public) of the Notes” in this pricing supplement.

## Secondary Market Prices of the Notes

For information about factors that will impact any secondary market prices of the notes, see “Selected Risk Considerations — Secondary Market Prices of the Notes Will Be Impacted by Many Economic and Market Factors” in this pricing supplement. In addition, we generally expect that some of the costs included in the original issue price of

the notes will be partially paid back to you in connection with any repurchases of your notes by JPMS in an amount that will decline to zero over an initial predetermined period that is intended to be the shorter of six months and one-half of the stated term of the notes. The length of any such initial period reflects the structure of the notes, whether our affiliates expect to earn a profit in connection with our hedging activities, the estimated costs of hedging the notes and when these costs are incurred, as determined by our affiliates. See “Selected Risk Considerations — The Value of the Notes as Published by JPMS (and Which May Be Reflected on Customer Account Statements) May Be Higher Than the Then-Current Estimated Value of the Notes for a Limited Time Period.”

### Supplemental Use of Proceeds

The notes are offered to meet investor demand for products that reflect the risk-return profile and market exposure provided by the notes. See “What Is the Total Return on the Notes at Maturity, Assuming a Range of Performances for the Reference Currency Relative to the Base Currency?” and “Hypothetical Examples of Amount Payable at Maturity” in this pricing supplement for an illustration of the risk-return profile of the notes and “Selected Purchase Considerations — Exposure to the Indian Rupee Relative to the U.S. Dollar” in this pricing supplement for a description of the market exposure provided by the notes.

The original issue price of the notes is equal to the estimated value of the notes plus the selling commissions paid to JPMS and other affiliated or unaffiliated dealers, plus (minus) the projected profits (losses) that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes, plus the estimated cost of hedging our obligations under the notes.

### Supplemental Plan of Distribution

We expect that delivery of the notes will be made against payment for the notes on or about the Original Issue Date set forth on the front cover of this pricing supplement, which will be the third business day following the Pricing Date of the notes (this settlement cycle being referred to as “T+3”). Under Rule 15c6-1 of the Securities Exchange Act of 1934, as amended, trades in the secondary market generally are required to settle in two business days, unless the parties to that trade expressly agree otherwise. Accordingly, purchasers who wish to trade notes on any date prior to two business days before delivery will be required to specify an alternate settlement cycle at the time of any such trade to prevent a failed settlement and should consult their own advisors.

### Validity of the Notes and the Guarantee

Restated below is the opinion of Davis Polk & Wardwell LLP, as special products counsel to JPMorgan Financial and JPMorgan Chase & Co., delivered on September 20, 2018, related to the notes:

“In the opinion of Davis Polk & Wardwell LLP, as special products counsel to JPMorgan Financial and JPMorgan Chase & Co., when the notes offered by this pricing supplement have been executed and issued by JPMorgan Financial and authenticated by the trustee pursuant to the indenture, and delivered against payment as contemplated herein, such notes will be valid and binding obligations of JPMorgan Financial and the related guarantee will constitute a valid and binding obligation of JPMorgan Chase & Co., enforceable in accordance with their terms, subject to applicable bankruptcy, insolvency and similar laws affecting creditors’ rights generally, concepts of reasonableness and equitable principles of general applicability (including, without limitation, concepts of good faith, fair dealing and the lack of bad faith), *provided* that such counsel expresses no opinion as to (i) the effect of fraudulent conveyance, fraudulent transfer or similar provision of applicable law on the conclusions expressed above or (ii) any provision of the indenture that purports to avoid the effect of fraudulent conveyance, fraudulent transfer or similar provision of applicable law by limiting the amount of JPMorgan Chase & Co.’s obligation under the related guarantee. This opinion is given as of the date hereof [September 20, 2018] and is limited to the laws of the State of New York, the General Corporation Law of the State of Delaware and the Delaware Limited Liability Company Act. In addition, this opinion is subject to customary assumptions about the trustee’s authorization, execution and delivery of the indenture and its authentication of the notes and the validity, binding nature and enforceability of the indenture with respect to the trustee, all as stated in the letter of such counsel dated March 8, 2018, which was filed as an exhibit to the Registration Statement on Form S-3 by JPMorgan Financial and JPMorgan Chase & Co. on March 8, 2018.”
