Selected Risks (continued)

- The estimated value of the notes will be lower than the original issue price (price to public) of the notes.
- The estimated value of the notes does not represent future values and may differ from others’ estimates.
- The value of the notes, which may be reflected in customer account statements, may be higher than the then current estimated value of the notes for a limited time period.
- Lack of liquidity: J.P. Morgan Securities LLC (who we refer to as JPMIS) intends to offer to purchase the notes in the secondary market but is not required to do so. The price, if any, at which JPMIS will be willing to purchase notes from you in the secondary market, if at all, may result in a significant loss of your principal.
- Potential conflicts: We and our affiliates may play a variety of roles in connection with the issuance of notes, including acting as calculation agent and hedging our obligations under the notes, and making the assumptions used to determine the pricing of the notes and the estimated value of the notes when the terms of the notes are set. It is possible that such hedging or other trading activities of J.P. Morgan and/or its affiliates could result in substantial returns for J.P. Morgan and/or its affiliates while the value of the notes decline.
- The tax consequences of the notes may be uncertain. You should consult your tax advisor regarding the U.S. federal income tax consequences of an investment in the notes.

The risks identified above are not exhaustive. Please see “Risk Factors” in the prospectus supplement and the applicable product supplement and “Selected Risk Considerations” in the applicable preliminary pricing supplement for additional information.
