

## Term sheet

To prospectus dated November 21, 2008,  
prospectus supplement dated November 21, 2008 and  
product supplement no. 206-A-I dated March 4, 2011

## Term Sheet to

Product Supplement No. 206-A-I  
Registration Statement No. 333-155535  
Dated July 21, 2011; Rule 433

# JPMORGAN CHASE & CO.

## Structured Investments

\$

## Buffered Notes Linked to the Dow Jones-UBS Commodity Index<sup>SM</sup> due February 14, 2013

### General

- The notes are designed for investors who seek an unleveraged return equal to the appreciation of the Dow Jones-UBS Commodity Index<sup>SM</sup>, up to a maximum total return on the notes that will not be less than 10.25%\* or greater than 14.25%\* at maturity. Investors should be willing to forgo interest payments, and if the Ending Index Level is less than the Strike Value by more than 10%, be willing to lose up to 90% of their principal. **Any payment on the notes is subject to the credit risk of JPMorgan Chase & Co.**
- **The notes are not futures contracts and are not regulated under the Commodity Exchange Act of 1936, as amended (the "Commodity Exchange Act").** The notes are offered pursuant to an exemption from regulation under the Commodity Exchange Act that is available to securities that have one or more payments indexed to the value, level or rate of one or more commodities, which is set out in section 2(f) of that statute. Accordingly, you are not afforded any protection provided by the Commodity Exchange Act or any regulation promulgated by the Commodity Futures Trading Commission.
- Senior unsecured obligations of JPMorgan Chase & Co. maturing February 14, 2013\*\*†
- Minimum denominations of \$1,000 and integral multiples thereof
- The notes are expected to price on or about August 11, 2011 and are expected to settle on or about August 16, 2011.

### Key Terms

**Index:** The Dow Jones-UBS Commodity Index<sup>SM</sup> (the "Index"). The official weekday closing level of the Dow Jones-UBS Commodity Index<sup>SM</sup> is published each trading day under the Bloomberg ticker symbol "DJUBS." For more information on the Index, please see "Selected Purchase Considerations — Return Linked to the Dow Jones-UBS Commodity Index<sup>SM</sup>" in this term sheet.

**Payment at Maturity: \*\*** If the Ending Index Level is greater than the Strike Value, at maturity you will receive a cash payment that provides you with a return per \$1,000 principal amount note equal to the Index Return, subject to a Maximum Total Return on the notes that will not be less than 10.25%\* or greater than 14.25%\*. For example, assuming the Maximum Total Return is 10.25%, if the Index Return is equal to or greater than 10.25%, you will receive the Maximum Total Return on the notes of 10.25%\*, which entitles you to a maximum payment at maturity of \$1,102.50\* for every \$1,000 principal amount note that you hold. Accordingly, if the Ending Index Level is greater than the Strike Value, your payment at maturity per \$1,000 principal amount note will be calculated as follows, subject to the Maximum Total Return:

$$\$1,000 + (\$1,000 \times \text{Index Return})$$

\* The actual Maximum Total Return on the notes and the actual maximum payment at maturity will be set on the pricing date and will not be less than 10.25% or greater than 14.25% and accordingly, the actual maximum payment at maturity will not be less than \$1,102.50 or greater than \$1,142.50 per \$1,000 principal amount note.

If the Ending Index Level is less than or equal to the Strike Value by up to 10%, you will receive the principal amount of your notes at maturity.

If the Ending Index Level is less than the Strike Value by more than 10%, you will lose 1% of the principal amount of your notes for every 1% that the Ending Index Level is less than the Strike Value by more than 10%, and your payment at maturity per \$1,000 principal amount note will be calculated as follows:

$$\$1,000 + [\$1,000 \times (\text{Index Return} + 10\%)]$$

*You will lose up to \$900 per \$1,000 principal amount note at maturity if the Ending Index Level is less than the Strike Value by more than 10%.*

**Buffer Amount:** 10%

**Index Return:** 
$$\frac{\text{Ending Index Level} - \text{Strike Value}}{\text{Strike Value}}$$

**Strike Value:** An Index level to be determined on the pricing date in the sole discretion of the calculation agent. **The Strike Value may or may not be the regular official weekday closing level of the Index on the pricing date.** Although the calculation agent will make all determinations and will take all actions in relation to the establishment of the Strike Value in good faith, it should be noted that such discretion could have an impact (positive or negative) on the value of your notes. The calculation agent is under no obligation to consider your interests as a holder of the notes in taking any actions, including the determination of the Strike Value, that might affect the value of your notes.

**Ending Index Level:** The Index Closing Level on the Observation Date

**Observation Date\*\*†:** February 11, 2013

Maturity Date\*\*†:February 14, 2013

CUSIP:48125XZX7

\*\*

Subject to early acceleration (and alternative calculation of the payment at maturity) in the event of a commodity hedging disruption event as described under “General Terms of Notes — Consequences of a Commodity Hedging Disruption Event — C. Early Acceleration of Payment on the Notes” in the accompanying product supplement no. 206-A-I and in “Selected Risk Considerations — We May Accelerate Your Notes If a Commodity Hedging Disruption Event Occurs” in this term sheet

†

Subject to postponement in the event of a market disruption event and as described under “Description of Notes — Payment at Maturity” and “Description of Notes — Postponement of a Determination Date — C. Notes linked to a single Index” in the accompanying product supplement no. 206-A-I

Investing in the Buffered Notes involves a number of risks. See “Risk Factors” beginning on page PS-16 of the accompanying product supplement no. 206-A-I and “Selected Risk Considerations” beginning on page TS-2 of this term sheet.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of the notes or passed upon the accuracy or the adequacy of this term sheet or the accompanying product supplement prospectus supplement and prospectus. Any representation to the contrary is a criminal offense.

	Price to Public (1)	Fees and Commissions (2)	Proceeds to Us
Per note	\$	\$	\$
Total	\$	\$	\$

- (1)The price to the public includes the estimated cost of hedging our obligations under the notes through one or more of our affiliates.
- (2)[If the notes priced today, J.P. Morgan Securities LLC and assuming a Maximum Total Return of 10.25%, which we refer to as JPMS, acting as agent for JPMorgan Chase & Co., would receive a commission of approximately \$12.50 per \$1,000 principal amount note. This commission includes the projected profits that our affiliates expect to realize, some of which may be allowed to other unaffiliated dealers, for assuming risks inherent in hedging our obligations under the notes. The actual commission received by JPMS may be more or less than \$12.50 and will depend on market conditions on the pricing date. In no event will the commission received by JPMS, which includes amounts that may be allowed to other dealers, exceed \$30.00 per \$1,000 principal amount note. See “Plan of Distribution (Conflicts of Interest)” beginning on page PS-89 of the accompanying product supplement no. 206-A-I and “Supplemental Plan of Distribution” on the last page of this term sheet.]

The notes are not bank deposits and are not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, nor are they obligations of, or guaranteed by, a bank.

J.P.Morgan

July 21, 2011

## Additional Terms Specific to the Notes

JPMorgan Chase & Co. has filed a registration statement (including a prospectus) with the Securities and Exchange Commission, or SEC, for the offering to which this term sheet relates. Before you invest, you should read the prospectus in that registration statement and the other documents relating to this offering that JPMorgan Chase & Co. has filed with the SEC for more complete information about JPMorgan Chase & Co. and this offering. You may get these documents without cost by visiting EDGAR on the SEC website at [www.sec.gov](http://www.sec.gov). Alternatively, JPMorgan Chase & Co., any agent or any dealer participating in this offering will arrange to send you the prospectus, the prospectus supplement, product supplement no. 206-A-I and this term sheet if you so request by calling toll-free 866-535-9248.

You may revoke your offer to purchase the notes at any time prior to the time at which we accept such offer by notifying the applicable agent. We reserve the right to change the terms of, or reject any offer to purchase, the notes prior to their issuance. In the event of any changes to the terms of the notes, we will notify you and you will be asked to accept such changes in connection with your purchase. You may also choose to reject such changes in which case we may reject your offer to purchase.

You should read this term sheet together with the prospectus dated November 21, 2008, as supplemented by the prospectus supplement dated November 21, 2008 relating to our Series E medium-term notes of which these notes are a part, and the more detailed information contained in product supplement no. 206-A-I dated March 4, 2011. **This term sheet, together with the documents listed below, contains the terms of the notes and supersedes all other prior or contemporaneous oral statements as well as any other written materials including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, fact sheets, brochures or other educational materials of ours.** You should carefully consider, among other things, the matters set forth in "Risk Factors" in the accompanying product supplement no. 206-A-I, as the notes involve risks not associated with conventional debt securities. We urge you to consult your investment, legal, tax, accounting and other advisers before you invest in the notes.

You may access these documents on the SEC website at [www.sec.gov](http://www.sec.gov) as follows (or if such address has changed, by reviewing our filings for the relevant date on the SEC website):

- Product supplement no. 206-A-I dated March 4, 2011:  
[http://www.sec.gov/Archives/edgar/data/19617/000089109211001577/e42537\\_424b2.pdf](http://www.sec.gov/Archives/edgar/data/19617/000089109211001577/e42537_424b2.pdf)
- Prospectus supplement dated November 21, 2008:  
[http://www.sec.gov/Archives/edgar/data/19617/000089109208005661/e33600\\_424b2.pdf](http://www.sec.gov/Archives/edgar/data/19617/000089109208005661/e33600_424b2.pdf)
- Prospectus dated November 21, 2008:  
[http://www.sec.gov/Archives/edgar/data/19617/000089109208005658/e33655\\_424b2.pdf](http://www.sec.gov/Archives/edgar/data/19617/000089109208005658/e33655_424b2.pdf)

Our Central Index Key, or CIK, on the SEC website is 19617. As used in this term sheet, the "Company," "we," "us" and "our" refer to JPMorgan Chase & Co.

## Supplemental Terms of the Notes

For purposes of the notes offered by this term sheet:

- (1) the Observation Date is subject to postponement as described under "Description of Notes — Postponement of a Determination Date — C. Notes linked to a single Index" in the accompanying product supplement no. 206-A-I; and
- (2) the consequences of a commodity hedging disruption event are described under "General Terms of Notes — Consequences of a Commodity Hedging Disruption Event — C. Early Acceleration of Payment on the Notes."

## Selected Purchase Considerations

- **CAPPED, UNLEVERAGED APPRECIATION POTENTIAL** — The notes provide the opportunity to earn an unleveraged return at maturity equal to the appreciation of the Index Return, up to the Maximum Total Return on the notes. The Maximum Total Return on the notes and the maximum payment at maturity will be set on the pricing date. The Maximum Total Return will not be less than 10.25% or greater than 14.25%, and accordingly, the maximum payment at maturity will not be less than \$1,102.50 or greater than \$1,142.50 per \$1,000 principal amount note. Because the notes are our senior unsecured obligations, payment of any amount at maturity is subject to our ability to pay our obligations as they become due.
- **LIMITED PROTECTION AGAINST LOSS** — We will pay you your principal back at maturity if the Ending Index Level is less than the Strike Value by up to 10%. If the Ending Index Level is less than the Strike Value by more than 10%, for every 1% that the Ending Index Level is less than the Strike Value by more than 10%, you will lose an amount equal to 1% of the principal amount of your notes. Accordingly, at maturity you will receive a payment at maturity equal to at least \$100 per \$1,000 principal amount note, subject to the credit risk of JPMorgan Chase & Co.
- **RETURN LINKED TO THE DOW JONES-UBS COMMODITY INDEX<sup>SM</sup>** — The return on the notes is linked solely to the Dow Jones-UBS Commodity Index<sup>SM</sup>, which is calculated, maintained and published daily by UBS Securities LLC and CME Group Index Services LLC. The Dow Jones-UBS Commodity Index<sup>SM</sup> is composed of exchange-traded futures contracts on physical commodities and is designed to be a highly liquid and diversified benchmark for commodities as an asset class. Its component weightings are determined primarily based on liquidity data, which is the relative amount of trading activity of a particular commodity. See "The DJ-UBS Commodity Indices" in the accompanying product supplement no. 206-A-I.

- **CAPITAL GAINS TAX TREATMENT** — You should review carefully the section entitled “Certain U.S. Federal Income Tax Consequences” in the accompanying product supplement no. 206-A-I. Subject to the limitations described therein, and based on certain factual representations received from us, in the opinion of our special tax counsel, Davis Polk & Wardwell LLP, it is reasonable to treat the notes as “open transactions” for U.S. federal income tax purposes, as described in the section entitled “Certain U.S. Federal Income Tax Consequences—Tax Consequences to U.S. Holders—Notes Treated as Open Transactions” in the accompanying product supplement. Assuming this characterization is respected, the gain or loss on your notes should be treated as long-term capital gain or loss if you hold your notes for more than a year, whether or not you are an initial purchaser of notes at the issue price. However, the Internal Revenue Service (the “IRS”) or a court may not respect this characterization or treatment of the notes, in which case the timing and character of any income or loss on the notes could be significantly and adversely affected. In addition, in 2007 Treasury and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments, such as the notes. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; the relevance of factors such as the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by Non-U.S. Holders should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” regime, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the notes, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the notes, including possible alternative treatments and the issues presented by this notice. Non-U.S. Holders should also note that they may be withheld upon unless they have submitted a properly completed IRS Form W-8BEN or otherwise satisfied the applicable documentation requirements.

The discussion in the preceding paragraph, when read in combination with the section entitled “Certain U.S. Federal Income Tax Consequences” in the accompanying product supplement, constitutes the full opinion of Davis Polk & Wardwell LLP regarding the material U.S. federal income tax consequences of owning and disposing of notes.

### Selected Risk Considerations

An investment in the notes involves significant risks. Investing in the notes is not equivalent to investing directly in the Index or in any futures contracts or exchange-traded or over-the-counter instruments based on, or other instruments linked to, the Index. These risks are explained in more detail in the “Risk Factors” section of the accompanying product supplement no. 206-A-I dated March 4, 2011.

- **YOUR INVESTMENT IN THE NOTES MAY RESULT IN A LOSS** — The notes do not guarantee any return of principal at maturity in excess of \$100 per \$1,000 principal amount note, subject to the credit risk of JPMorgan Chase & Co. The return on the notes at maturity is linked to the performance of the Index and will depend on whether, and the extent to which, the Index Return is positive or negative. If the Ending Index Level is less than the Strike Value by more than 10%, you will lose 1% of your principal amount at maturity for every 1% that the Ending Index Level is less than the Strike Value by more than 10%. Accordingly, you could lose up to \$900 for each \$1,000 principal amount note that you invest in.
- **YOUR MAXIMUM GAIN ON THE NOTES IS LIMITED TO THE MAXIMUM TOTAL RETURN** — If the Ending Index Level is greater than the Strike Value, for each \$1,000 principal amount note, you will receive at maturity \$1,000 plus an additional amount that will not exceed a predetermined percentage of the principal amount, regardless of the appreciation in the Index, which may be significant. We refer to this percentage as the Maximum Total Return, which will be set on the pricing date and will not be less than 10.25% or greater than 14.25%.
- **CREDIT RISK OF JPMORGAN CHASE & CO.** — The notes are subject to the credit risk of JPMorgan Chase & Co. and our credit ratings and credit spreads may adversely affect the market value of the notes. Investors are dependent on JPMorgan Chase & Co.’s ability to pay all amounts due on the notes at maturity, and therefore investors are subject to our credit risk and to changes in the market’s view of our creditworthiness. Any decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to affect adversely the value of the notes.

- **POTENTIAL CONFLICTS** — We and our affiliates play a variety of roles in connection with the issuance of the notes, including acting as calculation agent and hedging our obligations under the notes. In performing these duties, the economic interests of the calculation agent and other affiliates of ours are potentially adverse to your interests as an investor in the notes. It is possible that such hedging activities or other trading activities of ours or the other affiliates' could result in substantial returns for us or our affiliates while the value of the notes declines. **Although the calculation agent will make all determinations and will take all actions in relation to the establishment of the Strike Value in good faith, it should be noted that such discretion could have an impact (positive or negative) on the value of your notes. The calculation agent is under no obligation to consider your interests as a holder of the notes in taking any actions, including the determination of the Strike Value, that might affect the value of your notes.**
- **CERTAIN BUILT-IN COSTS ARE LIKELY TO AFFECT ADVERSELY THE VALUE OF THE NOTES PRIOR TO MATURITY** — While the payment at maturity described in this term sheet is based on the full principal amount of your notes, the original issue price of the notes includes the agent's commission and the estimated cost of hedging our obligations under the notes. As a result, and as a general matter the price, if any, at which JPMS will be willing to purchase notes from you in secondary market transactions, if at all, will likely be lower than the original issue price, and any sale prior to the maturity date could result in a substantial loss to you. This secondary market price will also be affected by a number of factors aside from the agent's commission and hedging costs, including those set forth under "Many Economic Factors Will Affect the Value of the Notes" below. The notes are not designed to be short-term trading instruments. Accordingly, you should be able and willing to hold the notes to maturity.
- **PRICES OF COMMODITY FUTURES CONTRACTS ARE CHARACTERIZED BY HIGH AND UNPREDICTABLE VOLATILITY, WHICH COULD LEAD TO HIGH AND UNPREDICTABLE VOLATILITY IN THE INDEX** — Market prices of the commodity futures contracts included in the Index tend to be highly volatile and may fluctuate rapidly based on numerous factors, including the factors that affect the price of the commodities underlying the commodity futures contracts included in the Index. See "The Market Prices of the Commodities Underlying the Futures Contracts Included in the Index Will Affect the Value of the Notes" below. The prices of commodity futures contracts are subject to variables that may be less significant to the values of traditional securities, such as stocks and bonds. These variables may create additional investment risks that cause the value of the notes to be more volatile than the values of traditional securities. As a general matter, the risk of low liquidity or volatile pricing around the maturity date of a commodity futures contract is greater than in the case of other futures contracts because (among other factors) a number of market participants take physical delivery of the underlying commodities. Many commodities are also highly cyclical. The high volatility and cyclical nature of commodity markets may render such an investment inappropriate as the focus of an investment portfolio.
- **WE MAY ACCELERATE YOUR NOTES IF A COMMODITY HEDGING DISRUPTION EVENT OCCURS** — If we or our affiliates are unable to effect transactions necessary to hedge our obligations under the notes due to a commodity hedging disruption event, we may, in our sole and absolute discretion, accelerate the payment on your notes and pay you an amount determined in good faith and in a commercially reasonable manner by the calculation agent. If the payment on your notes is accelerated, your investment may result in a loss and you may not be able to reinvest your money in a comparable investment. Please see "General Terms of Notes — Consequences of a Commodity Hedging Disruption Event — C. Early Acceleration of Payment on the Notes" in the accompanying product supplement no. 206-A-I for more information.
- **COMMODITY FUTURES CONTRACTS ARE SUBJECT TO UNCERTAIN LEGAL AND REGULATORY REGIMES** — The commodity futures contracts that underlie the Index are subject to legal and regulatory regimes in the United States and, in some cases, in other countries that may change in ways that could adversely affect our ability to hedge our obligations under the notes and affect the value of the Index. Any future regulatory changes, including but not limited to changes resulting from the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), which was enacted on July 21, 2010, may have a substantial adverse effect on the value of your notes. Additionally, in accordance with the Dodd-Frank Act, the U.S. Commodity Futures Trading Commission is drafting regulations that will affect market participants' position limits in certain commodity-based futures contracts, such as futures contracts on certain agricultural commodities, energy commodities and metals. These proposed regulations, when final and implemented, may reduce liquidity in the exchange-traded market for such commodity-based futures contracts. Furthermore, we or our affiliates may be unable as a result of such restrictions to effect transactions necessary to hedge our obligations under the notes, in which case we may, in our sole and absolute discretion, accelerate the payment on your notes. See "We May Accelerate Your Notes If a Commodity Hedging Disruption Event Occurs" above.
- **THE MARKET PRICES OF THE COMMODITIES UNDERLYING THE FUTURES CONTRACTS INCLUDED IN THE INDEX WILL AFFECT THE VALUE OF THE NOTES** — The prices of the commodities upon which the futures contracts that compose the Index are based are affected by numerous factors, including: changes in supply and demand relationships, governmental programs and policies, national and international monetary, trade, political and economic events, wars and acts of terror, changes in interest and exchange rates, speculation and trading activities in commodities and related contracts, general weather conditions, and agricultural, trade, fiscal and exchange control policies. Many commodities are also highly cyclical. These factors, some of which are specific to the market for each such commodity, may cause the value of the different commodities upon which the futures contracts that compose the Index are based, as well as the futures contracts

themselves, to move in inconsistent directions at inconsistent rates. This, in turn, will affect the value of the notes linked to the Index. It is not possible to predict the aggregate effect of all or any combination of these factors.

- **A DECISION BY AN EXCHANGE ON WHICH THE FUTURES CONTRACTS UNDERLYING THE INDEX ARE TRADED TO INCREASE MARGIN REQUIREMENTS MAY AFFECT THE LEVEL OF THE INDEX** — If an exchange on which the futures contract underlying the Index are traded increases the amount of collateral required to be posted to hold positions in such futures contracts (*i.e.*, the margin requirements), market participants who are unwilling or unable to post additional collateral may liquidate their positions, which may cause the level of the Index to decline significantly.
- **THE NOTES DO NOT OFFER DIRECT EXPOSURE TO COMMODITY SPOT PRICES** — The notes are linked to the Index, which tracks commodity futures contracts, not physical commodities (or their spot prices). The price of a futures contract reflects the expected value of the commodity upon delivery in the future, whereas the spot price of a commodity reflects the immediate delivery value of the commodity. A variety of factors can lead to a disparity between the expected future price of a commodity and the spot price at a given point in time, such as the cost of storing the commodity for the term of the futures contract, interest charges incurred to finance the purchase of the commodity and expectations concerning supply and demand for the commodity. The price movements of a futures contract are typically correlated with the movements of the spot price of the referenced commodity, but the correlation is generally imperfect and price movements in the spot market may not be reflected in the futures market (and vice versa). Accordingly, the notes may underperform a similar investment that is linked to commodity spot prices.
- **OWNING THE NOTES IS NOT THE SAME AS OWNING ANY COMMODITIES OR COMMODITY FUTURES CONTRACTS** — The return on your notes will not reflect the return you would realize if you actually purchased the futures contracts composing the Index, the commodities upon which the futures contracts that compose the Index are based, or other exchange-traded or over-the-counter instruments based on the Index. You will not have any rights that holders of such assets or instruments have.
- **HIGHER FUTURES PRICES OF THE COMMODITY FUTURES CONTRACTS UNDERLYING THE INDEX RELATIVE TO THE CURRENT PRICES OF SUCH CONTRACTS MAY AFFECT THE VALUE OF THE INDEX AND THE VALUE OF THE NOTES** — The Index is composed of futures contracts on physical commodities. Unlike equities, which typically entitle the holder to a continuing stake in a corporation, commodity futures contracts normally specify a certain date for delivery of the underlying physical commodity. As the exchange-traded futures contracts that compose the Index approach expiration, they are replaced by contracts that have a later expiration. Thus, for example, a contract purchased and held in August may specify an October expiration. As time passes, the contract expiring in October is replaced with a contract for delivery in November. This process is referred to as “rolling.” If the market for these contracts is (putting aside other considerations) in “contango,” where the prices are higher in the distant delivery months than in the nearer delivery months, the purchase of the November contract would take place at a price that is higher than the price of the October contract, thereby creating a *negative* “roll yield.” Contango could adversely affect the value of the Index and thus the value of notes linked to the Index. The futures contracts underlying the Index have historically been in contango.
- **SUSPENSION OR DISRUPTIONS OF MARKET TRADING IN THE COMMODITY MARKETS AND RELATED FUTURES MARKETS MAY ADVERSELY AFFECT THE LEVEL OF THE INDEX, AND THEREFORE THE VALUE OF THE NOTES** — The commodity markets are subject to temporary distortions or other disruptions due to various factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention. In addition, U.S. futures exchanges and some foreign exchanges have regulations that limit the amount of fluctuation in futures contract prices that may occur during a single day. These limits are generally referred to as “daily price fluctuation limits” and the maximum or minimum price of a contract on any given day as a result of these limits is referred to as a “limit price.” Once the limit price has been reached in a particular contract, no trades may be made at a different price. Limit prices have the effect of precluding trading in a particular contract or forcing the liquidation of contracts at disadvantageous times or prices. These circumstances could adversely affect the level of the Index and, therefore, the value of your notes.
- **THE NOTES ARE LINKED TO AN EXCESS RETURN INDEX AND NOT A TOTAL RETURN INDEX** — The notes are linked to an excess return index and not a total return index. An excess return index, such as the Index, reflects the returns that are potentially available through an unleveraged investment in the contracts composing such index. By contrast, a “total return” index, in addition to reflecting those returns, also reflects interest that could be earned on funds committed to the trading of the underlying futures contracts.
- **NO INTEREST PAYMENTS** — As a holder of the notes, you will not receive any interest payments.
- **LACK OF LIQUIDITY** — The notes will not be listed on any securities exchange. JPMS intends to offer to purchase the notes in the secondary market but is not required to do so. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the notes easily. Because other dealers are not likely to make a secondary market for the notes, the price at which you may be able to trade your notes is likely to depend on the price, if any, at which JPMS is willing to buy the notes.
- **MANY ECONOMIC AND MARKET FACTORS WILL AFFECT THE VALUE OF THE NOTES** — In addition to the level of the Index on any day, the value of the notes will be affected by a number of economic and market factors that may either offset or magnify each other, including:
  - the actual and expected volatility of the Index and the underlying futures contracts;
  - the time to maturity of the notes;

- the market price of the physical commodities upon which the futures contracts underlying the Index are based;
- interest and yield rates in the market generally;
- a variety of economic, financial, political, regulatory, geographical, agricultural, meteorological and judicial events; and
- our creditworthiness, including actual or anticipated downgrades in our credit ratings.

## What Is the Total Return on the Notes at Maturity, Assuming a Range of Performances for the Index?

The following table and examples illustrate the hypothetical total return at maturity on the notes. The “total return” as used in this term sheet is the number, expressed as a percentage, that results from comparing the payment at maturity per \$1,000 principal amount note to \$1,000. The hypothetical total returns set forth below assume a Strike Value of 165 and a Maximum Total Return on the notes of 10.25% and reflect the Buffer Amount of 10%. The actual Maximum Total Return will be set on the pricing date and will not be less than 10.25% or greater than 14.25%. The hypothetical total returns set forth below are for illustrative purposes only and may not be the actual total return applicable to a purchaser of the notes. The numbers appearing in the following table and examples have been rounded for ease of analysis.

Index Closing Level	Index Return	Total Return
297.0000	80.00%	10.25%
272.2500	65.00%	10.25%
247.5000	50.00%	10.25%
231.0000	40.00%	10.25%
214.5000	30.00%	10.25%
198.0000	20.00%	10.25%
189.7500	15.00%	10.25%
185.2125	10.25%	10.25%
181.9125	10.00%	10.00%
173.2500	5.00%	5.00%
166.6500	1.00%	1.00%
<b>165.0000</b>	<b>0.00%</b>	<b>0.00%</b>
156.7500	-5.00%	<b>0.00%</b>
148.5000	-10.00%	<b>0.00%</b>

### Hypothetical Examples of Amounts Payable at Maturity

The following examples illustrate how the total returns set forth in the table above are calculated.

**Example 1: The level of the Index increases from the Strike Value of 165 to an Ending Index Level of 173.25.**

Because the Ending Index Level of 173.25 is greater than the Strike Value of 165, the investor receives a payment at maturity of \$1,050 per \$1,000 principal amount note, calculated as follows:

$$\$1,000 + (\$1,000 \times 5\%) = \$1,050$$

**Example 2: The level of the Index decreases from the Strike Value of 165 to an Ending Index Level of 148.50.**

Although the Index Return is negative, because the Ending Index Level of 148.50 is less than the Strike Value of 165 by not more than the Buffer Amount of 10%, the investor receives a payment at maturity of \$1,000 per \$1,000 principal amount note.

**Example 3: The level of the Index increases from the Strike Value of 165 to an Ending Index Level of 231.**

Because the Ending Index Level of 231 is greater than the Strike Value of 165 and the Index Return of 40% exceeds the hypothetical Maximum Total Return of 10.25%, the investor receives a payment at maturity of \$1,102.50 per \$1,000 principal amount note, the maximum payment on the notes.

**Example 4: The level of the Index decreases from the Strike Value of 165 to an Ending Index Level of 115.50.**

Because the Index Return is negative and the Ending Index Level of 115.50 is less than the Strike Value of 165 by more than the Buffer Amount of 10%, the investor receives a payment at maturity of \$800 per \$1,000 principal amount note, calculated as follows:

$$\$1,000 + [\$1,000 \times (-30\% + 10\%)] = \$800$$

**Example 5: The level of the Index decreases from the Strike Value of 165 to an Ending Index Level of 0.**

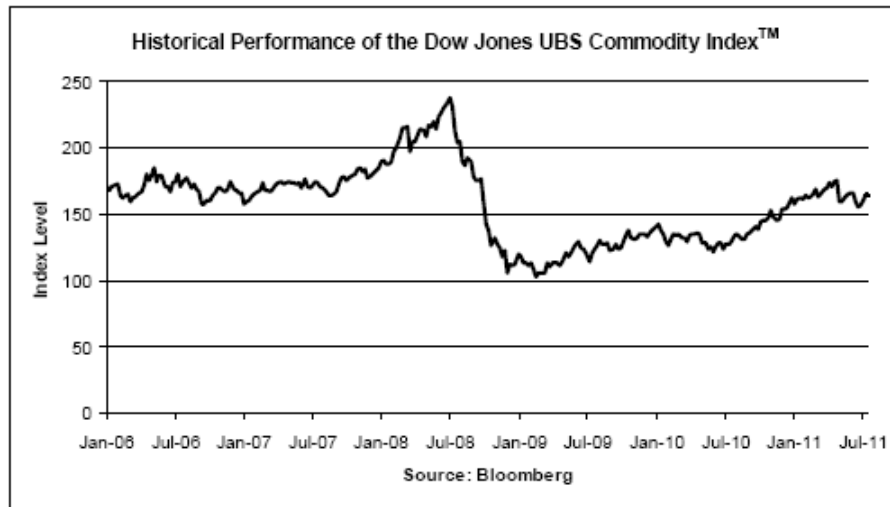

Because the Index Return is negative and the Ending Index Level of 0 is less than the Strike Value of 165 by more than the Buffer Amount of 10%, the investor receives a payment at maturity of \$100 per \$1,000 principal amount note, which reflects the benefit provided by the Buffer Amount of 10%, calculated as follows:

$$\$1,000 + [\$1,000 \times (-100\% + 10\%)] = \$100$$

These returns and the payouts on the notes shown above do not reflect fees or expenses that would be associated with any sale in the secondary market. If these fees and expenses were included, the hypothetical total returns and payouts shown above would likely be lower.

## Historical Information

The following graph sets forth the historical performance of the Index based on the weekly historical Index Closing Levels from January 6, 2006 through July 15, 2011. The Index Closing Level on July 20, 2011 was 164.5288. We obtained the Index Closing Levels below from Bloomberg Financial Markets. We make no representation or warranty as to the accuracy or completeness of the information obtained from Bloomberg Financial Markets. The historical levels of the Index should not be taken as an indication of future performance, and no assurance can be given as to the Index Closing Level on the Observation Date. We cannot give you assurance that the performance of the Index will result in the return of any of your initial investment at maturity in excess of \$100 per \$1,000 principal amount note, subject to the credit risk of JPMorgan Chase & Co.

## Supplemental Use of Proceeds

For purposes of the notes offered by this term sheet, the second paragraph under “Use of Proceeds” in the accompanying product supplement no. 206-A-I is deemed to be replaced by the following paragraph: “Each agent’s commission will include the projected profit that our affiliates expect to realize in consideration for assuming the risks inherent in hedging our obligations under the notes. Because hedging our obligations entails risk and may be influenced by market forces beyond our control, such hedging may result in a profit that is more or less than expected, or could result in a loss. See also “Use of Proceeds” in the accompanying prospectus.”
