1. Overview

Aim of the public disclosure report

This report provides information on JPMorgan Chase Bank, N.A. Johannesburg Branch capital structure, capital adequacy, risk exposures, and risk weighted assets ("RWA"). This disclosure fulfils the requirements as set out in The Regulations to the Banks Act, issued by the Prudential Authority, Directive D1 of 2019, Directive D1 of 2024, and the Basel Committee of Banking Supervision Standards (BCBS).

Ownership and firm-wide disclosure

JPMorgan Chase Bank, N.A. Johannesburg Branch ("JPMCB Jhb" or the "Branch") is a branch of JPMorgan Chase Bank, National Association ("the Bank") and is registered as an external company in South Africa. The Bank's ultimate parent is JPMorgan Chase & Co. ("the Firm"), a financial holding company incorporated in the United States of America.

Firm-wide disclosure is made under Basel III requirement and is available at the below link.

Reference is made to this firm-wide disclosure throughout the document:

<http://investor.shareholder.com/jpmorganchase/basel.cfm>

The above firm-wide report should be read in conjunction with the Annual Report on Form 10-K and the Quarterly Report on Form 10-Q which have been filed with the U.S. Securities and Exchange Commission and are available at the following link:

<http://investor.shareholder.com/jpmorganchase/sec.cfm>

This document refers to JPMorgan Chase or the "Firm" when referring to frameworks, methodologies, systems and controls that are adopted throughout JPMorgan Chase & Co. and its subsidiaries. Entity names are used to refer to documents, financial resources and other tangible concepts relevant only to that entity.

Business activities

JPMCB Jhb is a leading provider of financial services in South Africa, including trading in foreign exchange, fixed income and interest rate markets, as well as structured products, cash management, liquidity products, loans and advisory services to South African corporate and state-owned enterprises.

JPMCB Jhb holds a banking license in South Africa regulated by the Prudential Authority ("PA"), is also an Authorised Dealer regulated by the South African Reserve Bank ("SARB") and an Authorised Financial Services Provider regulated by the Financial Sector Conduct Authority ("FSCA") and the Financial Intelligence Centre.

JPMCB Jhb also holds a Primary Dealer license and is a trading member of the Johannesburg Stock Exchange Interest Rate and Currency Derivative Market ("IRC"). The Branch was approved by the FSCA in April 2021 as an Over-the-Counter Derivative Provider ("ODP") and is also a direct ZAR clearing member for both low value and high value ZAR payments.

Governance

As a branch of the Bank, governance is ultimately the responsibility of the Board of Directors of JPMorgan Chase Bank, N.A. who is responsible for the oversight of management of the Bank. The JPMorgan Chase Bank, N.A. Board accomplishes this function acting directly and through the principal standing committees of the Firm's Board of Directors. Risk oversight on behalf of the Bank is primarily the responsibility of the Risk Policy Committee of the Board of Directors and the Audit Committee of the Firm's Board of Directors and, with respect to compensation and

other management-related matters, the Compensation & Management Development Committee of the Firm's Board of Directors.

In South Africa, JPMCB Jhb is managed through the Branch Oversight Committee and Directors (SA BOCD). The SA BOCD is the most senior cross business and support function governance committee in South Africa and responsible for legal entity risk management and governance. The SA BOCD is the escalation forum for all risks and control issues requiring the attention of executive officers. The Committee is responsible for oversight of the risk and control framework and overall strategy of the Branch, including as provided under the Banks Act and other Financial Sector Legislation and/or Regulations applicable to the Branch and the legal entities.

The SA BOCD own the overall country strategy and is responsible across all businesses for ensuring that the Firm's business in JPMCB Jhb is conducted in an appropriate manner in accordance with Firm policies and values.

Risk profile

The risk profile of JPMCB JHB is driven by the business activities described above and primarily includes Credit risk (incl. Counterparty Credit risk), Market risk, Operational risk, Liquidity risk and Interest Rate Risk in the Banking Book. Please see relevant sections for further details.

2. Risk management framework (Table OVA)

Risk is an inherent part of JPMorgan Chase's business activities. When the Firm extends a consumer or wholesale loan, advises customers and clients on their investment decisions, makes markets in securities, or offers other products or services, the Firm takes on some degree of risk. The Firm's overall objective is to manage its business, and the associated risks, in a manner that balances serving the interests of its clients, customers and investors and protects the safety and soundness of the Firm.

The Firm believes that effective risk management requires, among other things:

- Acceptance of responsibility, including identification and escalation of risk issues by all individuals within the Firm;
- Ownership of risk identification, assessment, data and management within each of the lines of business ("LOB") and Corporate ; and

A Firmwide risk governance and oversight structure The Firm follows a disciplined and balanced compensation framework with strong internal governance and independent oversight by the Board of Directors (the "Board").

Risk organisation

The Firm's risk governance framework is managed on a Firmwide basis. The Firm has an Independent Risk Management ("IRM") function, which comprises Risk Management and Compliance. The Firm's CEO appoints, subject to approval by the Risk Committee of the Board of Directors (the "Board Risk Committee"), the Firm's CRO to lead the IRM function and manage the risk governance framework of the Firm. The framework is subject to approval by the Board Risk Committee through its review and approval of the Risk Governance and Oversight Policy.

The Firm's CRO oversees and delegates authority to the Firmwide Risk Executives ("FREs"), the Chief Risk Officers of the LOBs and Corporate ("LOB CROs"), and the Firm's Chief Compliance Officer ("CCO"), who, in turn, establish Risk Management and Compliance organizations, develop the Firm's risk governance policies and standards, and define and oversee the implementation of the Firm's risk governance framework. The LOB CROs oversee risks that arise in their LOBs and Corporate, while FREs oversee risks that span across the LOBs, functions and regions. Each area of the Firm giving rise to risk is expected to operate within the parameters identified by the IRM function, and within its own management-identified risk and control standards.

The Firm's "three lines of defence" are as follows:

The first line of defence consists of each LOB, Treasury and CIO, and certain Other Corporate initiatives, including their aligned Operations, Technology and Control Management. The first line of defence owns the identification of risks within their respective organizations and the design and execution of controls to manage those risks. Responsibilities also include adherence to applicable laws, rules and regulations and implantation of the risk governance framework established by IRM, which may include policies, standards, limits, thresholds and controls.

The second line of defence is the IRM function, which is separate from, and independently assesses and challenges the first line of defence risk management practices. IRM is also responsible for the identification of risks within its respective organization, adherence to applicable laws, rules and regulations and for the development and implementation of policies and standards with respect to its own processes.

The third line of defence is Internal Audit, an independent function that provides objective assessment of the adequacy and effectiveness of Firmwide processes, controls, governance

and risk management. The Internal Audit function is headed by the General Auditor, who reports to the Audit Committee and administratively to the CEO.

In addition, there are other functions that contribute to the firmwide control environment but are not considered part of a particular line of defence, including Finance, Human Resources and Legal. These other functions are responsible for the identification of risks within their respective organisation, adherence to applicable laws, rules and regulations and policies and implementation of the risk governance framework established by IRM.

Risk governance

Risk Management Organisation

The independent status of the IRM function is supported by a governance structure that provides for escalation of risk issues to senior management, the Firmwide Risk Committee (“FRC”), and the Board of Directors, as appropriate.

The chart below illustrates the committees of the Board of Directors and key senior management-level committees in the Firm’s risk governance structure. In addition, there are other committees, forums and paths of escalation that support the oversight of risk which are not shown in the chart.

^(a) The Firm's CRO may escalate directly to the Board Risk Committee. The Firmwide Risk Committee escalates to the Board Risk Committee, as appropriate.

^(b) As of December 31, 2023, the CEO of the Corporate & Investment Bank was also the Firm's President and Chief Operating Officer. Refer to Recent events on page 52 for further information.

^(c) The Chief Data and Analytics Officer role was added to the Operating Committee in June 2023.

^(d) Effective February 12, 2024, the Global Head of Corporate Responsibility and Chairman of the Mid-Atlantic Region became a member of the Operating Committee, and the Vice Chairman became an emeritus member of the Operating Committee.

^(e) The General Auditor reports to the Audit Committee and administratively to the Firm's CEO.

^(f) The Asset and Liability Committee escalates to the Firm's CEO or the Board of Directors (including its committees).

Global LE risk governance

Framework overview

JPMorgan Chase conducts its business through Legal Entities (LEs) located across different jurisdictions globally. It is incumbent on lines of business and corporate functions to manage risk at the level of the LE and to comply with associated regulatory expectations. The Risk Management and Compliance (RM&C) organization has established the RM&C LE Framework which can be articulated as follows:

- The RM&C Legal Entity Forum (LE Forum) oversees the framework as the governing body, supported by the RM&C LE Framework team. (LE Framework Team)
- LEs are tiered based on RM&C factors, which define appropriate levels of LE risk governance and oversight and the requirement for appointment of LE Risk Managers ("LERM") or Chief Risk Officers (CROs) where required by regulatory designations.
- LERMs are accountable for the holistic LE Risk oversight.
- LERMs may delegate responsibility for certain tasks to Regional CRO teams.
- Risk functions/strips are responsible for setting global standards and executing legal entity requirements with respect to risk oversight and should consider the implementation in an LE (where appropriate) in the design of the standard, tool or programs.

Legal Entity Forum

The Legal Entity Forum is the global governing body for the RM&C LE Risk Framework, inclusive of Risk Management and Compliance, Conduct and Operational Risk ("CCOR") and acts as a Project Steering Group for agreeing to decisions, assumptions, milestones and implementation across the regions. Core members include Regional CROs, Regional CCOR Officers, Regional Operational Risk Officers, JPMCB NA Risk Lead and CIB CRO and AWM CRO. Additional individuals are invited, subject to the agenda.

The LE Forum exercises oversight and control of the legal entity risk management and governance standards across all regions. It is responsible for:

- Periodic review and update of LE RM&C Framework and Governance documentation, as required.
- Establishing, reviewing, and making recommendations and considering exceptions to standards, guidance and procedures that relate to the RM&C LE governance.
- Acting as a Steering Group to hold project leaders and participants accountable for implementation; and
- Reviewing and addressing matters relating to the RM&C LE Risk governance support model

LE risk tiering

Risk Management oversight of LEs is executed according to the risk profile of a LE. The risk profile of a LE is derived by applying the LE risk tiering methodology, the result of which will determine a LE's 'Risk Tier'.

Risk tiering comprises four categories ranging from one to four, with Risk Tier one representing the highest requirement for LE Risk governance and oversight. The tiering methodology is comprised of qualitative and quantitative elements and a different level of oversight is established for each Tier, driven by a range of internal and external risk governance requirements.

The core and recommended governance standards have been created for each Tier of governance. JPMCB Jhb has been classified as a Risk Tier 2 entity under this framework.

EMEA risk governance

Whilst J.P. Morgan has established a comprehensive Firmwide risk policy framework, this is supplemented as required by legal entity-specific risk policies, which are approved by the relevant entity Boards.

To complement the global LOB structure, there is a regional risk governance construct as per below:

- The EMEA Risk Committee (ERC) provides oversight of the risks inherent in the Firm's business conducted in EMEA or booked into EMEA entities and relevant branches as well as EMEA branches of ex-EMEA firms. Oversight of Tier 2 and 3 entities (including JPMCB Jhb, which is a tier 2 LE) is delegated to the EMEA Legal Entity Risk Committee (ELERC), a sub-committee of the
- The ERC is accountable to the EMEA Management Committee (EMC) and the Boards, Risk Committees and Oversight Committees of the relevant LE's. It reports to the Firmwide Risk Committee (FRC), the EMEA HR Control Forum, in addition to the EMC and the relevant legal entity boards.
- The EMEA CRO leads the Risk Management function in the region and chairs the ERC. The EMEA CRO is a member of the EMC and ELERC.

Other key committees with responsibilities to focus on capital and liquidity include the EMEA Capital Committee (EMEA CRO is a member) and the EMEA Asset Liability Committee ("EMEA ALCO")

JPMCB Jhb Risk Governance Framework

The appointed Branch LERM, is a member of the JPMCB Jhb Branch Oversight Committee and Directors (BOCD) and is a member of the ELERC.

JPMCB Jhb's activities are the responsibility of the BOCD whose appointment are approved by the PA. The Branch Oversight Committee acknowledges its responsibility to be informed about, and to assess the level of risk that arises from its activities, its need to discuss with management the nature and management of that risk, to be informed of significant internal control issues and to receive information on events or developments that could expose JPMCB Jhb to substantial loss.

EMEA legal entity risk reporting

J.P. Morgan undertakes risk reporting at legal entity level, for entities with material business or risk profiles.

The Legal Entity Risk Reporting team ("LERR") is based in Bournemouth and uses the JPM reporting hubs in Bangalore and Frankfurt; LERR production of legal entity reporting packs is centralized, and includes credit risk and market risk reporting details, as well as other risk stripes added as relevant to the legal entity risk profile.

All legal entity risk reporting is governed by rigorous controls, and prior to circulation to LE Risk Managers, the information within the reports is reviewed and/or signed off by individuals within the specific risk stripes, or with specific risk responsibilities for the legal entities. Summary reporting for the risk stripe mentioned above is shared with appropriate risk committees as required.

Risk Data Aggregation and Risk Reporting framework

To provide guidance on the implementation of BCBS 239 Principles and to enable consistent interpretation of these principles across the Firm, JPMorgan Chase & Co. defined a set of Minimum Standards.

To evidence compliance with the minimum standards, each risk area produces a Risk Data Aggregation and Risk Reporting (RDARR) framework document.

The framework includes four primary components:

- Risk Area definition
- Functional operating model
- Business definition
- Technology

Compliance with BCBS 239 Principles is reported quarterly to the Risk Management & Compliance Control Committee (RM&C CC) and annually to the Board Risk Committee (BRC).

Additionally, Internal Audit opine on the control environment supporting the compliance with the BCBS239 Principles. The evaluation is performed on risk-based audit plan and in line with the JPMC IA methodology.

Risk Data Aggregation and Reporting

The firm wide Risk Data Aggregation and Risk Reporting (RDARR) framework supports Risk Management's data aggregation and reporting processes including stress reporting in accordance with the Basel Committee on Banking Supervision Principles (BCBS 239 Principles). The RDARR framework has been approved by the Firm's Board Risk Committee ("RC") and compliance with BCBS 239 Principles is reported annually to the Board RC.

The framework includes four primary components:

- Definition of risk including magnitude and composition.
- Required components that establish the minimum set of processes, functions and controls.
- Business operating model and governance; and
- Technology and data required to support the Firm's Risk Data Aggregation and Reporting requirements.

To provide guidance on the implementation of BCBS 239 Principles and to enable consistent interpretation of the regulatory language and Principles across the Firm, a 'JPM Minimum Compliance Standards' document has been established. This document is reviewed annually and is available on the firm's internal BCBS Governance portal.

Compliance with the JPM Minimum Standards at Risk Reporting Stripe level is governed by an independent team ('BCBS 239 Governance Team') for completeness and consistency through periodic assessments.

Risk Identification

The LOBs and Corporate own the identification of risks within their respective organizations, as well as the design and execution of controls, including IRM-specified controls, to manage those risks. To support this activity, the Firm has a risk identification framework designed to facilitate each LOB and Corporate's responsibility to identify material risks inherent to the Firm's businesses and operational activities, catalogue them in a central repository and review material risks on a regular basis. The IRM function reviews and challenges the LOB and Corporate's identified risks, maintains the central repository and provides the consolidated Firmwide results to the Firmwide Risk Committee ("FRC") and Board Risk Committee.

The Firm's risk governance framework involves understanding drivers of risks, types of risks, and impacts of risks.

Drivers of Risk

Drivers of risks are factors that cause a risk to exist. Drivers of risks include, but are not limited to, the economic environment, regulatory or government policy, competitor or market evolution, business decisions, process or judgment error, deliberate wrongdoing, dysfunctional markets, and natural disasters.

Types of Risks

Types of risks are categories by which risks manifest themselves. The Firm's risks are generally categorized in the following four risk types:

- Strategic risk is the risk to earnings, capital, liquidity or reputation associated with poorly designed or failed business plans or inadequate response to changes in the operating environment.
- Credit and investment risk is the risk associated with the default or change in credit profile or a client, counterparty or customer; or loss of principal or a reduction in expected returns on investment, including consumer credit risk, wholesale credit risk, and investment portfolio risk.
- Market risk is the risk associated with the effect of changes in market factors, such as interest and foreign exchange rates, equity and commodity prices, credit spreads or implied volatilities, on the value of assets and liabilities held for both the short and long term.
- Operational risk is the risk of an adverse outcome resulting from inadequate or failed internal processes or systems; human factors; or external events impacting the Firm's processes or systems. Operational risk includes cybersecurity, compliance, conduct, legal, and estimation and model risk.

Impact of Risks

Impacts of risks are consequences of risks, both quantitative and qualitative. There may be many consequences of risks manifesting, including quantitative impacts such as a reduction in earnings and capital, liquidity outflows, and fines or penalties, or qualitative impacts such as damage to the Firm's reputation, loss of clients and customers, and regulatory and enforcement actions.

JPMCB Jhb completes an Internal Capital Adequacy Assessment Process ("ICAAP") periodically. The ICAAP forms part of management and decision-making processes including capital and risk management frameworks, and stress testing. The ICAAP is used to identify applicable and material risks to which JPMCB Jhb is exposed; how these risks are measured, managed, monitored and mitigated; and how much capital the Branch should hold for these risks now, in the future and under stressed conditions.

Risk appetite

Risk Appetite is a high-level statement of the Firm's tolerance for risk. The Firm's overall appetite for risk is governed by Risk Appetite frameworks for quantitative and qualitative risks.

Quantitative and qualitative risks are assessed to monitor and measure the Firm's capacity to take risk consistent with its stated risk appetite. Risk appetite results are reported to the Board Risk Committee.

JPMC's quantitative risk appetite is set and approved by JPM's CEO, CFO and CRO, prior to approval by the Board Risk Committee. JPMC's firm level Qualitative Risk Appetite statement must be reviewed and approved by the Board Risk Committee at least annually. The Qualitative Risk Appetite statement requires JPMC CRO and CEO approval prior to the approval by the Board Risk Committee.

The Board Risk Committee must:

- Review and approve Firm, LOB and JPMCB risk appetite for quantitative parameters, and the firm level qualitative risk appetite statement, at least annually, following management approval as specified in the Quantitative Risk Appetite policy and Qualitative Risk Appetite policy.
- Review Firm, LOB and JPMCH Risk Appetite results, at least quarterly breaches of risk appetite are escalated to the Board Risk Committee, as specified in the Quantitative Risk Appetite policy and Qualitative Risk Appetite policy.

Quantitative Risks

Quantitative risk appetite is set and evaluated in the context of the Firm's business strategy and risk taking, as well as capital and liquidity planning as determined during the periodic assessment process. Quantitative risk appetite is set for each of the following risk types:

- Profitability risk
- Capital risk
- Consumer credit risk
- Wholesale credit risk
- Market risk
- Structural interest rate risk
- Liquidity risk

Risk appetite is a business as usual ("BAU") risk management framework which includes ongoing assessment of Firm, LOB and JPMCB performance against risk appetite. Risk Appetite is designed to assess performance under normal and moderately stressed conditions. Firm level risk appetite is set such that profitability of the Firm is the primary loss absorbing mechanism. Risk Appetite is part of the Firm's ongoing capital management process, including the assessment of planned capital actions through the quarterly review of Risk Appetite results.

Qualitative Risks

The Firmwide Risk Executive (FRE) of Qualitative Risk Appetite is responsible for developing the Firmwide Qualitative Risk Appetite framework, inclusive of the Qualitative Risk Appetite statement, which includes the following risk areas: Compliance, Conduct, Reputational and Operational. The framework outlines a qualitative evaluation that is supported by quantitative measures (metrics).

Risk appetite for qualitative risks is set by LOBs and/or CFs and evaluated in the context of the firm's business strategy and risk taking and considers a broad range of constraints and associated objectives (e.g., financial, regulatory, reputational). The Quarterly Assessment results will be shared with the Firmwide Risk Committee, providing opportunity for raising issues or challenge, prior to presentation to the Board Risk Committee.

JPMCH Jhb as a Branch, is subject to the Firmwide Quantitative Risk Appetite policy and Firmwide Qualitative Risk Appetite policy.

Additionally, the Branch has established specific risk limits and thresholds as an expression of its appetite for capital and liquidity related risks.

3. Statement of financial position

Assets (R millions)	2023	2022	2021
Balances with central bank	1,090	1,612	546
Treasury bills	3,489	3,979	4,414

Total equity	13,706	13,702	13,707
Total equity and liabilities	66,255	83,858	61,203

Basis of preparation

The preparation of the numbers within the Statement of Financial Position and the Summarised Statement of Comprehensive Income have been prepared in accordance with the International Financial Reporting Standards ("IFRS") Accounting Standards and reported in accordance with PA's Regulations relating to Banks.

Offsetting

Financial assets and financial liabilities are offset, and the net amount reported in the Statement of Financial Position when the Branch has a legally enforceable right to offset the recognised amounts, and intends to settle on a net basis, or to realise the asset and settle the liability simultaneously.

4. Summarised statement of comprehensive income

(R millions)	2023	2022	2021
Net interest income	1,202	304	440
Trading revenue and fee income	338	1,127	487
Gross operating income	1,540	1,430	927
Credit impairment released/(raised)	(8)	(3)	(60)
Operating expenses	(696)	(697)	(637)
Net profit before taxation	836	736	230
Taxation	(258)	(248)	(105)
Net profit after taxation	578	488	126

5. Regulatory capital

Regulatory capital base for JPMCB Jhb

JPMCB Jhb's regulatory capital base as at 31 December 2023 was R13 700 million. The Branch remits profits to Head office and losses are reimbursed to JPMCB Jhb monthly. Approval from the PA is dependent on JPMCB Jhb retaining an additional 10% capital buffer. This approval is renewed annually. The regulatory capital position of JPMCB Jhb is as follows:

(R millions)	2023	2022	2021
Common Equity Tier 1			
Capital			
<i>Endowment capital from parent</i>	13,767	13,767	13,767
<i>Accumulated other comprehensive income</i>			
Regulatory adjustments			
<i>Goodwill</i>

Total risk weighted assets	36,575	36,830	45,443
CET Tier 1 capital adequacy ratio	37.46%	37.03%	30.11%
Tier 1 capital adequacy ratio	37.46%	37.03%	30.11%
Total capital adequacy ratio	37.51%	37.09%	30.11%

6. Leverage position

The Branch's leverage ratio provides comfort regarding the strength of the Branch's short term liquidity position and ensures a prudent funding structure. JPMCB Jhb's leverage ratio is managed at a branch level and is compliant with the minimum requirements contained in the regulations.

	December 2023	December 2022	December 2021
Leverage ratio	26,31%	21,92%	38.14%

7. Credit risk (table CRA, CRB, CRC and CRD)

Risk definition

Credit risk is the risk associated with the default or change in credit profile of a client, counterparty or customer. In its wholesale businesses, J.P. Morgan is exposed to credit risk through its underwriting, lending, market-making, and hedging activities with and for clients and counterparties, as well as through its operating services activities (such as cash management and clearing activities), and securities financing activities. The Firm is also exposed to credit risk through its investment securities portfolio and cash placed with banks.

Risk Governance and Policy framework

Credit Risk Management, monitors, measures and manages credit risk throughout the J.P. Morgan group and defines credit risk policies and procedures. The Firm's credit risk management governance includes the following activities:

- Maintaining a credit risk policy framework
- Monitoring, measuring and managing credit risk across all portfolio segments, including transaction and exposure approval.
- Setting industry and geographic concentration limits, as appropriate, and establishing underwriting guidelines.
- Assigning and managing credit authorities in connection with the approval of credit exposure
- Managing criticized exposures and delinquent loans, and
- Estimating credit losses and supporting appropriate credit risk-based capital management.

J.P. Morgan has developed policies and practices that are designed to preserve the independence and integrity of the approval and decision-making process for extending credit so that credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The firm-wide policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposures.

Approach to Risk Management

Risk Measurement

To measure credit risk the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Methodologies for measuring credit risk vary depending on several factors, including type of asset, risk measurement parameters and risk management and collection processes. Credit risk measurement is based on the probability of default of an obligor or counterparty, the loss severity given a default event and the exposure at default.

Credit loss estimates are based on estimates of the probability of default (PD) and loss severity given default (LGD). Wholesale loans, commercial & industrial and other, include loans made to a variety of clients, ranging from large corporate and institutional clients to high-net-worth individuals. The primary credit quality indicator for wholesale loans is the internal risk rating assigned to each loan. Risk ratings are used to identify the credit quality of loans and differentiate risk within the portfolio. Risk ratings on loans consider the PD and the LGD. The PD is the likelihood that a loan will default. The LGD is the estimated loss on the loan that would be realized upon the default of the borrower and takes into consideration collateral and structural support for each credit facility. Risk ratings are used to identify the credit quality of loans and

differentiate risk within the portfolio. Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and adjusted as necessary for updated information affecting the obligor's ability to fulfil its obligations. The calculations and assumptions are based on both internal and external historical experience and management judgment and are reviewed regularly.

Counterparty Risk relies upon multiple measures to capture, monitor, and control counterparty credit risk. This includes but is not limited to metrics on Stress, Peak, Duration Based Settlement Exposure and Gross Market Concentration.

Concentration Risk

Concentrations of credit risk arise when a few clients, counterparties or customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions. The Firm regularly monitors various segments of its credit portfolios to assess potential credit risk concentrations and to obtain additional collateral when deemed necessary and permitted under the Firm's agreements. Senior management is involved in the credit approval and review process, and risk levels are adjusted as needed to reflect the Firm's risk appetite. The firm manages Wholesale Credit Risk at a client and portfolio level, and has established relevant client and portfolio limits, thresholds, and indicators to monitor, escalate and control large concentrations of credit exposure that can subject the firm to the risk of credit losses. Credit risk concentrations are evaluated primarily by industry and monitored regularly on both an aggregate portfolio level and on an individual client or counterparty basis.

Credit Risk Approval and Control

Approval of Clients: All clients are subject to credit analysis and financial review by Credit Risk Management before new business is accepted.

Establishment of Credit Lines: All credit exposure must be approved by a Credit Officer(s) with the level of credit authority required by the applicable credit authority grid unless qualifying for rules-based policies, standards or where there are explicit guidelines that state credit approvals are not required. Such approval, together with details of the credit limits are recorded in the Credit Systems.

In some instances, credit limits can be established according to predetermined rules that are subject to annual review by the appropriate Credit Officers. The governing risk policy framework provides a single, consistent, global approach while allowing the application of differing local requirements.

Risk Monitoring

The Firm has developed policies and practices that are designed to preserve the independence and integrity of the approval and decision-making process of extending credit to ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposures. In addition, certain models, assumptions and inputs used in evaluating and monitoring credit risk are independently validated by groups that are separate from the lines of business.

Risk Reporting

To enable monitoring of credit risk and effective decision-making, aggregate credit exposure, credit quality forecasts, concentration levels and risk profile changes are reported regularly to senior members of Credit Risk Management. Detailed portfolio reporting of industry, clients, counterparties and customers, product and geography are prepared, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, risk committees, senior management and the Board of Directors.

Stress Testing

Stress testing is important in measuring and managing credit risk in the Firm's credit portfolio. The stress testing process assesses the potential impact of alternative economic and business scenarios on estimated credit losses for the Firm. Economic scenarios and the underlying parameters are defined centrally, articulated in terms of macroeconomic factors and applied across the businesses. The stress test results may indicate credit migration, changes in delinquency trends and potential losses in the credit portfolio. In addition to the periodic stress testing processes, management also considers additional stresses outside these scenarios, including industry and country specific stress scenarios, as necessary. The Firm uses stress testing to inform decisions on setting risk appetite both at a Firm and LOB level, as well as to assess the impact of stress on individual counterparties.

Branch risk management

JPMCB Jhb's credit risk is driven by the following:

- Financial services institutions counterparties as a result of market-making, trading, clearing, counterparty or other relationships. JPMCB Jhb routinely executes transactions with counterparties in the financial services industry, including brokers and dealers, banks, investment and pension funds, asset managers and other clients which expose it to credit risk
- JPMCB Jhb also executes transactions with large South African corporates, State Owned Enterprises and South African subsidiaries of global multinational corporations
- JPMCB Jhb is also exposed to risk of non-performance by its clients, which it may seek to mitigate through the maintenance of adequate collateral, a process that is managed centrally for the Bank. JPMCB Jhb, as a standalone entity, only accepts ZAR deposits as collateral from local corporates in compliance with exchange control regulations
- Certain models, assumptions and inputs used in evaluating and monitoring credit risk are validated by support functions that are separate and independent from the businesses
- Credit Executives within the Firm who approve extensions of credit for JPMCB Jhb ultimately report to the Head of Wholesale Credit Risk. Each line of business ("LOB") within the Firm has its own independent credit risk management function, reporting to the CRO. To enable monitoring of credit risk, aggregate credit exposure, concentration levels and risk profile changes are reported to senior credit risk management and to the regional risk committee

JPMCB Jhb adopts the following approaches for calculating the credit risk capital requirements:

- Credit risk: Standardised approach
- Counterparty credit risk: Standardised Approach to Counterparty Credit Risk (1 January 2021)
- JPMCB Jhb uses Moody's for external credit ratings. No change from prior years

Expected credit loss measurement

Impairment of financial assets and lending-related commitments

Instruments in scope of Traditional Credit Products (TCP) include loans, lending-related commitments, and other lending products stemming from extensions of credit to borrowers (including intercompany and affiliated entities). The Branch establishes an ECL for these instruments to ensure they are reflected in the financial statements at the Branch's best estimate of the net amount expected to be collected. The ECL is determined on in-scope financial instruments measured at amortized cost or FVOCI. ECL are measured collectively via a portfolio-based (modeled) approach for Stage 1 and 2 assets but are generally measured individually for Stage 3 assets.

ECL are forecasted over the 12-month term (Stage 1) or expected life (Stage 2 or 3) of in-scope financial instruments, where the forecast horizon includes the reasonable and supportable (R&S) forecast period, the reversion period and the residual period and considers the time value of money. In determining the ECL measurement and staging for a financial instrument, the Branch applies the definition of default consistent with the Basel definition of default to maintain uniformity of the definition across the Firm.

Determining the appropriateness of the allowance is complex and significant assumptions about future economic conditions and credit behaviours that are inherently uncertain. Further, estimating the allowance involves consideration of a range of possible outcomes, which management evaluates to determine its best estimate. A number of significant judgements are also required in measuring ECL, such as:

Determining the criteria for identifying when financial instruments have experienced a significant increase in credit risk;

Choosing appropriate forecasts and assumptions for the measurement of ECL;

Establishing the number and relative weightings of forward-looking scenarios for each type of financial instrument/market and the associated ECL; and

Establishing groups of similar financial assets for the purposes of measuring ECL

The measurement of ECLs must reflect:

An unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;

The time value of money; and

Reasonable and evidence-based information about past events, current (economic) conditions, and forecasts of future economic conditions

Subsequent evaluations of the TCP portfolio, in light of the circumstances then prevailing, may result in significant changes in the ECL in future periods

The Branch considers the appropriateness of decisions and judgments regarding methodology and inputs utilized in developing estimates of ECL each reporting period

Impact of staging on measuring expected credit losses

ECL are measured using a three-stage model based on changes in credit quality of the financial instrument since it was initially recognized ("initial recognition"):

Stage 1—performing financial instruments that have not had a significant increase in credit risk since initial recognition;

Stage 2—performing financial instruments that have experienced a significant increase in credit risk; and

Stage 3—non-performing financial instruments that have been determined to be credit-impaired

Unimpaired and without significant increase in credit risk (Stage 1)

Financial instruments that have not had a significant increase in credit risk ("SICR") since initial recognition are included in Stage 1. For Stage 1 instruments, ECL are calculated by considering the probability of default within 12 months after the reporting date on a collective basis and interest revenue is calculated on the gross carrying amount of the asset (that is, without deduction for the credit loss allowance).

Non-TCP intercompany assets with material legal entities that are covered by the Firm's resolution and recovery plans are considered to be investment grade and therefore these are included in Stage 1 with no SICR.

Significant increase in credit risk (Stage 2)

Financial instruments that have experienced a SICR since initial recognition for which there is no objective evidence of impairment are included in Stage 2. For Stage 2 instruments, ECL are calculated considering the probability of default over the remaining life of the instrument on a

collective basis and interest revenue is calculated on the gross carrying amount of the asset (that is, without deduction for the credit loss allowance).

The Branch assesses for evidence of a SICR by considering whether there has been a change in the risk of a default occurring since the financial instrument was initially recognized.

For TCP, the Branch assesses SICR based on a combination of qualitative and quantitative assessments, as described in more detail below:

Quantitative criteria

- The Branch determines whether the probability of a default ("PD") occurring has changed between the initial recognition and the reporting date of a financial instrument. If the change in PD exceeds certain relative and absolute thresholds, the instrument has experienced a SICR. The assessment of the PD takes into account reasonable and supportable information, including information about past events, current and future economic conditions

Qualitative criteria

- The Branch monitors borrowers that may become impaired by including them on its watch list. Obligors that are on the watch list are considered to have experienced a SICR. The Branch also monitors changes in internal credit risk ratings (relative to the credit rating on initial recognition) and delinquency triggers to determine if a borrower has experienced a SICR
- The Branch's TCP portfolio is mostly comprised of large, international, wholesale borrowers. For these borrowers, short-term delinquencies alone are not considered to be a meaningful credit quality indicator as the Branch's experience has shown that other internal credit quality indicators generally identify increases in credit risk well before delinquency. As such, the Branch has determined that using the quantitative and qualitative assessments described above are most appropriate for capturing SICR for TCP
- Financial instruments that are in Stage 2 are moved to Stage 1 as described below in the period that the quantitative and qualitative assessments for a SICR no longer exist. The approach for determining whether there has been a SICR for Non-TCP portfolios depends on the type of instrument. The Branch presumes non-TCP financial assets that are 30 days past due have experienced a SICR and are included in Stage 2 except for certain fee receivables (i.e. fee receivables with institutional clients which follow a different billing and collection cycle) that are classified in Stage 2 at 90 days past due

Default and credit-impairment (Stage 3)

Financial instruments are included in Stage 3 when there is objective evidence of impairment at the reporting date. For Stage 3 instruments, ECL are calculated considering the probability of default over the remaining life of each instrument ("Lifetime ECL") on an individual asset basis and interest revenue is calculated on the net carrying amount (that is, net of the allowance for credit losses). All financial assets, regardless of their category as TCP, Non-TCP or debt security, are considered to be credit-impaired and are included in Stage 3 when one or more of the following events that have a detrimental impact on the estimated future cash flows of that financial asset has occurred:

Significant financial difficulty of the issuer or the borrower;

A default or past due event;

The Branch has granted a concession to the borrower for economic or contractual reasons relating to the borrower's financial difficulty;

It has become probable the borrower will enter bankruptcy or other financial re-organisation;

An active market for that financial asset no longer exists because of the borrower's financial difficulties; or

A financial asset is purchased or originated at a deep discount that reflects a credit loss has been incurred

Generally, a Stage 3 financial asset is considered to no longer be impaired when the borrower has made payments for a minimum of six months and there is other objective evidence of credit improvement.

However, for assets that were considered to be Stage 3 as a result of a restructuring where the borrower experiencing difficulty was granted a financial concession, there is no cure period and the asset will remain in Stage 3.

ECL measurement for TCP portfolios

ECL for stage 1 and stage 2 assets is determined using a collective assessment model that estimates losses expected on the portfolio from possible defaults in the next 12 months or lifetime depending on whether the instrument is included in stage 1 or 2. The 12-month ECL are calculated by multiplying the 12-month Probability of Default, Exposure at Default and Loss Given Default. Lifetime ECL are calculated using the lifetime PD instead.

These inputs are collectively known as the modeled estimate and are described in further detail below:

Probability of Default ("PD"): The PD model estimates the probability of a borrower defaulting given certain macroeconomic scenarios and the probability of a borrower moving from one risk rating to another during the reasonable and supportable period. The 12-month and lifetime PDs represent the probability of default occurring over the next 12 months and the remaining maturity of the instrument respectively. The PD is determined at a facility level. Country specific information is applied to risk ratings, as appropriate in accordance with internal risk rating guidelines. Beyond the reasonable and supportable period, the probability of default and likelihood of downgrade are based on long run historical averages with no macroeconomic forecasting element. Internal historical default data is used for all periods, both during the reasonable and supportable ("R&S") forecast period and beyond

Loss Given Default ("LGD"): LGD, also known as loss severity, represents the amount of loss, expressed as a percentage, in the event the facility defaults under a given forecasted macroeconomic environment during the reasonable and supportable period. Beyond the reasonable and supportable period long run historical average LGD is used based on the Loan's risk characteristics (e.g., secured type, region, LOB). Country specific considerations are also applied to the LGD inputs, as appropriate. Similar to PD, internal historical default data is used for all periods, both during the R&S forecast period and beyond

Exposure at Default ("EAD"): Exposure at Default represents the gross exposure of the Firm upon the Obligor's default and is characterized, as follows:

- Term Loans—EAD is 100% of exposure, net of amortization
- Revolving commitments—EAD is a model-based estimate that considers the expectation of future utilization at the facility level in the case of a default under a given macroeconomic environment
- After the R&S forecast period, a long run EAD is determined based on the facility's risk characteristics
- All other unfunded committed facilities—EAD is determined judgmentally and where appropriate, empirically, based on the type of credit facility, line of business, underlying risk characteristics and utilization

Forward-looking information

ECL estimates are derived from the Branch's historical experience and future forecasted economic conditions. To incorporate forward-looking information into the ECL calculation, the Branch develops forecasted economic scenarios. As mentioned in 2020 Developments, the Branch moved from three forward looking scenarios (upside, base and downside) to five forward looking scenarios (base, relative upside, extreme upside, relative downside and extreme downside cases) during the year. Each of these scenarios contain a set of MEVs that reflect forward-looking economic and financial conditions. MEVs include, but are not limited to FX rates, inflation and GDP per country or country block (group of countries that have similar economic circumstances). MEVs for each scenario are projected over a reasonable and supportable forecast period of two years. After the forecast period, the losses revert to historical averages over a one-year transition period.

On a quarterly basis, the five economic scenarios are updated, and probability weighted. The Branch uses judgement to develop the scenarios and assign probability weightings. The most likely economic scenario in management's view is the base case which would generally be expected to be weighted more heavily than the other two scenarios.

The PD, LGD and EAD models are designed to forecast the credit quality and performance of a TCP portfolio based on industry, geography, rating and size of obligors, among other attributes of the portfolio.

PD, LGD and EAD models are calibrated based on historical MEVs and use forecasted macroeconomic scenarios for projecting PD, LGD and EAD values.

ECL calculation

The Branch uses the forward-looking PD, LGD, and EAD values for each of the scenarios to produce the scenario credit losses ("SCLs"). The modelled ECL estimate includes a probability-weighted calculation of the five SCLs discounted using the original effective interest rate or an approximation thereof. The weightings are periodically reviewed and approved centrally by a risk governance committee within the Firm.

As part of the normal review process, the central ECL calculation is subject to further adjustment to take into consideration the requirements of the Branch. As the centrally estimated ECL are not specific to local and regional conditions, the Branch completes a local review, which involves conducting individual client reviews and reviewing local MEVs and will adjust the centrally estimated ECL to appropriately reflect the Branch's portfolio. Management applies judgement in making this adjustment, which considers economic and political conditions, quality of underwriting standards, borrower behaviour, deterioration within an industry, product or portfolio, as well as other relevant internal and external factors affecting the credit quality of the portfolio. In certain instances, the interrelationships between these factors create further uncertainties.

In 2020, the Branch enhanced its statistical model methodology used for collective assessment to better estimate expected credit losses. Key model enhancements included:

Expansion of forecasting during the reasonable and supportable period from using three forward looking scenarios (central, adverse and upside) to five forward looking scenarios (central, relative upside, extreme upside, relative adverse and extreme adverse)

Introduction of large loan uncertainty (LLU), captures the variation in loan sizes across the portfolio by taking into consideration the risk of large exposures defaulting due to the nonhomogeneous nature of the portfolio

Stage 3 portfolio estimation techniques

In estimating ECL for Stage 3 Loans using an individual discounted cash flow assessment, broad economic conditions affecting a borrower are less relevant as they may not have a direct impact on the specific borrower and its ability to service its debts. Consequently, the Branch

believes that borrower specific scenarios are the most relevant in estimating expected credit losses in an individual discounted cash flow assessment. When applying the discounted cash flow methodology, the Branch projects cash flows under three borrower-specific forecast scenarios that are reviewed, adjusted and ultimately blended into one-probability weighted calculation of ECL.

Modification of loans

The Branch may modify terms with borrowers that are not experiencing financial difficulty. In these instances, the Branch will make a determination of whether the modification results in a new financial asset. If the modification is substantive, the existing loan is de-recognised and a new financial asset is recognised. If the modification does not result in a new financial asset, the unamortised net fees are carried forward as part of the recorded Investment in the modified loan along with any new fees or costs associated with the modification.

The Branch seeks to modify certain loans in conjunction with its loss-mitigation activities. A modification may result in the Branch granting one or more concessions to a borrower who is experiencing financial difficulty in order to minimise the Branch's economic loss, avoid foreclosure or repossession of the collateral, and to ultimately maximise cash flows received by the Branch from the borrower.

Concessions granted vary by borrower, and may include interest rate reductions, term extensions, payment deferrals, principal forgiveness, or the acceptance of equity or other assets in lieu of cash.

Such loan modifications are included in Stage 3, and the loans are considered to be credit-impaired until they mature, are repaid, or are otherwise liquidated, regardless of whether the borrowers perform under the modified terms. These modified loans are measured for impairment using the Branch's established asset-specific allowance methodology. An impaired loan generally remains subject to the asset-specific allowance methodology throughout its remaining life.

Impairment of Non TCP transactions

The Branch's approach to measuring ECL for Non-TCP portfolios depends on the type of instrument. See detail below for ECL analysis per balance sheet line item.

a. Cash and balances at central banks

Cash and balances with central banks include interest-bearing deposits and are held with investment grade institutions. In evaluating the lifetime ECL related to receivables from a bank, the Branch determined the expected probability of default was extremely remote, and the magnitude of lifetime ECL related to exposures would be negligible as these are regulated investment-grade institutions that have significant capital, loss absorbing capacity and liquidity. The majority of the deposits held are short term in nature and can be withdrawn at short notice (typically overnight). The Branch includes cash and balances at central banks in Stage 1 as they are short-term and investment-grade and banking institutions are considered to have high quality credit with low risk of default and therefore the Branch has concluded there is no material SICR.

b. Deposits with banks

The Branch places substantially all of its deposits with banks which are of investment-grade. Refer above for ECL assessment. Similar to cash and balances at central banks, the Branch includes loans and advances to banks in Stage 1 as investment-grade institutions are considered to have high quality credit with low risk of default and therefore the Branch has concluded there is no material SICR.

c. Securities purchased under agreements to resell and securities borrowed

The Branch generally bears credit risk related to resale agreements and securities borrowed where cash advanced to the counterparty exceeds the expected value of the collateral received on default.

The Branch's credit exposure on these transactions is significantly lower than the amounts recognised on balance sheet as the substantial majority represent contractual value before consideration of any collateral received.

Where a fully collateralised arrangement exists (for example a reverse repurchase agreement), the estimate of the allowance is immaterial due to the following credit mitigants:

Continuous margining requirements: The contractual terms of these agreements are designed to ensure that they are fully collateralised based on continuous margining requirements, even when the credit risk of the borrower increases significantly. The contractual terms provide the Branch (as lender) with the legal right to receive additional margin from the borrower each day a margin deficit exists. The contractual terms also allow the Branch to increase margin requirements, and to revoke or reduce commitments to the borrower at any time

Intercompany arrangements may be repayable on demand: The vast majority of the Branch's collateralised intercompany lending arrangements are executed under master contracts that provide additional protections for the Firm, such as stipulating that extensions of credit are repayable on demand

High quality collateral: If, in the extremely rare circumstance that the borrower were to default, because the collateral is generally of high quality or is otherwise considered highly liquid, the Branch has the legal right and operational ability, as well as the intent, to immediately seize the collateral and liquidate it in a timely and price-efficient manner to minimize any loss

The majority of securities purchased under agreements to resell are held at fair value. The fair value of the security collateral in respect of securities financing transactions is, in aggregate, greater than the net amounts reported on balance sheet.

Securities financing arrangements tend to be short-term in nature with no history of credit losses. These arrangements are included in Stage 1 as the Branch has determined there is no SICR during the short tenor of the instrument as at 31 December 2023. The Branch recognises no ECL on these balances as the ECL related to these exposures is assessed as immaterial.

d. Debtors

Debtors consist of trade and other debtors. Trade debtors mainly consist of unsettled trades, receivables related to sales of securities which have not yet settled. These receivables generally have minimal credit risk due to the low probability of default of a clearing organisation default and failure to deliver, and the short-term nature of receivables related to securities settlements which are predominately on a delivery versus payment basis. The Branch recognises no ECL on these balances as the ECL related to these exposures is assessed as immaterial.

Other debtors primarily comprise receivables related to cash collateral paid to counterparties in respect of derivative financial instruments. Margin posted in cash is reflected as a receivable from the counterparty and is carried at amortised cost. Furthermore, the Branch provides clearing services to its clients wherein it facilitates the execution and settlement of derivative transactions by intermediating between a Central Clearing Party ("CCP") and a client, the associated cash collateral is recognised at amortised cost. In evaluating the lifetime ECL related to receivables from a CCP, the Branch determined the expected probability of CCP default was extremely remote, and the magnitude of lifetime expected credit losses related to CCP exposures would be

negligible due to the robust multi-layered credit protection inherent in the design and operations of the CCP clearing model. The Firm includes these receivables in Stage 1 due to the robust multi-layered credit protection inherent in the design and operations of the CCP clearing model.

e. Fee receivables

Fee receivables arise out of revenue from contracts with customers. Staging and write off policies depend on the nature of the asset.

Fee receivables for institutional clients are included in Stage 1 if they are less than 90 days past due ("dpd"), and instruments less than 180 dpd are included in Stage 2. A fee receivable from an institutional client is deemed to be credit-impaired and 100% reserved when it is 180 dpd.

The Branch has not had significant losses on its fee receivable portfolios and based on the immateriality of these losses, the provision matrix and staging approach described is applied.

Fee receivables from non-institutional clients are included in Stage 1 if they are less than 30 dpd, and instruments less than 90 dpd are included in Stage 2. A fee receivable for non-institutional clients is deemed to be credit-impaired and 100% reserved when it is 90 dpd. The Firm has not had significant losses on its fee receivable portfolios and based on the immateriality of these losses, the provision matrix and staging approach described is applied.

The Branch continues to monitor the fee receivable population to ensure the described framework is appropriate and ECL on this portfolio are adequately reflected.

f. Non-TCP intercompany transactions

Non-TCP include, but are not limited to, other debt instruments such as reverse repurchase agreements, margin loans, fee receivables, and intercompany receivables (such as cash and deposits).

All intercompany exposures had formerly been considered non-TCP, but have been segmented based on product type, irrespective of whether the borrower is third party or intercompany. In other words, TCP and non-TCP both have intercompany positions. For intercompany transactions where the counterparty is a Material Legal Entity ("MLE"), the Branch's anticipated ECL was determined to not be material and no loss was recognized, for the following reasons:

The MLE has been prepositioned with funding in an extremely efficient manner from both a liquidity and a capital perspective

JPMorgan Chase Bank, N.A. ("JPMCB") and the JP Morgan Chase's Intermediate Holding Company ("IHC") are obligated to provide financial support to their direct and indirect subsidiaries in connection with the Support Agreement that is put in place as part of the Firm's resolution planning process, which effectively functions as a guarantee/backstop for intercompany lending arrangements with an MLE borrower

As MLEs are adequately capitalized to ensure the MLE can fulfil all of its obligations even in the event of an orderly liquidation of JPMorgan Chase and are of investment grade, these intercompany receivables are included in Stage 1 as they are held with MLEs and considered to not have an increase in credit risk that would result in material expected credit losses. Receivables from MLE's are only included in Stage 2 if the obligor is no longer considered an MLE and there is evidence of credit deterioration of the obligor, or if certain support triggers defined in the JPMorgan Chase's Resolution Plan occur. Receivables from MLE's are not credit-impaired as the Firm ensures MLE's are more than adequately capitalized as required by the Firms Resolution Plan.

The anticipated ECL for other receivables from non MLEs was determined to not be material and no loss was recognized.

g. Non-TCP intercompany transactions

The Branch has determined that ECL on other non-TCP portfolios are immaterial due to:

The existence of credit risk mitigants such as the existence of the collateral;

The credit quality of the borrower (e.g. investment-grade); and/or the short-term nature of the instrument. Similarly, the Branch has determined that these non-TCP portfolios are without SICR (i.e. Stage 1) due to the credit quality of the borrower and/or the short-term nature of the instrument

For non-TCP intercompany transactions, the Branch evaluates the counterparty based on the consolidated Firm's resolution and recover plan, tenor of the instrument and any collateral received. The Branch has not experienced any losses on non-TCP intercompany transactions.

The Branch continues to monitor its Non-TCP portfolios to ensure the described framework is appropriate and its exposure to credit risk and ECL on these portfolios are adequately reflected in the allowance for credit losses.

Write-offs

Loans recognised as loans and advances on the balance sheet are charged off when it is highly certain that a loss has been realised. The determination of whether to recognise a charge-off includes many factors, including the prioritisation of the Branch's claim in bankruptcy, expectations of the workout/restructuring of the loan and valuation of the borrower's equity or the loan collateral.

All other financial assets are written off when there is no reasonable expectation of recovery and the amount of loss can be reasonably estimated or when the asset is past due for a specified period.

8. Counterparty credit risk (table CCRA)

Risk management objectives and policies related to counterparty credit risk

The Firm-wide approach is outlined in the Firm's Pillar 3 Regulatory Capital Disclosures document. JPMCB Jhb activity falls within this firmwide approach and calculation methodology. JPMCB Jhb CCR approach follows Firmwide limits and Credit risk techniques and is complemented by activities and governance that are specific to JPMCB Jhb.

JPMCB Jhb calculates standalone CCR on a standardised approach, based on its exposure to OTC derivatives.

Credit Officers in CIB Credit Risk Management are appointed and assigned credit approval authorities according to their experience and seniority within the Firm.

As per Firmwide approach, all potential new clients are subject to credit analysis and financial review by Credit Risk before new business is accepted.

The credit risk strategy is set alongside each local line of business so as to provide independence and integrity of decision making and ensure credit risks are accurately assessed, properly approved, continually monitored and actively managed at both the transaction and portfolio levels.

A change in credit status and rating of a client or major market change will be flagged to the Credit Officers via an industry, risk, or client review or via a specific Relationship Manager. This will trigger an ad-hoc client review. Significant deviation from the previous profile will prompt referral by the Credit Officer for re-approval or adjustment of the current credit facility. All credit relationships are subject to a periodic review in accordance with the Firm's Credit Risk Policy in addition to ongoing monitoring by Credit Risk Management and CIB Relationship Managers. Credit lines may also be reviewed on receipt of new credit requests from clients or as a consequence of industry, market (including FX fluctuation) or client events.

JPMCB Jhb exposure to counterparty credit risk

	Unmargined netting sets		Margined netting sets		Exposure amount	
	Replacement costs	Potential future exposure add-on	Replacement costs	Potential future exposure add-on	Unmargined netting sets	Margined netting sets
	(R millions)	(R millions)	(R millions)	(R millions)	(R millions)	(R millions)
2023

Total	6,548	7,371	27	880	19,487	1,269

Credit derivatives are held in the trading book and are fully hedged resulting in no net market risk. Credit derivatives are netted with other derivative exposures with the same counterparty under ISDA agreements.

9. Market risk (table MRA)

Market risk is the risk associated with the effect of changes in market factors such as interest and foreign exchange rates, equity and commodity prices, credit spreads or implied volatilities, on the value of assets and liabilities held for both the short and long term.

For a discussion of the Firm's Market Risk Management organisation, various metrics, both statistical and nonstatistical, used to assess risk and risk monitoring and control, see Market Risk Management Section in the Complete Annual Report.

Market Risk Management monitors market risks throughout the Firm and defines market risk guidance. The Market Risk Management function reports to the Firm's Chief Risk Officer ('CRO'), and seeks to manage risk, facilitate efficient risk/return decisions, reduce volatility in operating performance and provide transparency into the Firm's market risk profile for senior management, the Board of Directors and regulators. Risk governance and policy framework

JPMCB Jhb's approach to market risk governance mirrors the Firm-wide approach and additional oversight is provided by JPMCB Jhb's LERM.

Risk measurement

There is no single measure to capture market risk and therefore the Firm and JPMCB Jhb use various metrics both statistical and non-statistical to assess risk. The appropriate set of risk measures utilized for a given business activity is tailored based on business mandate, risk horizon, materiality, market volatility and other factors.

Value-at-Risk ('VaR')

The Firm utilises VaR, a statistical risk measure, to estimate the potential loss from adverse market moves in the current market environment.

The VaR framework is employed across the Firm using historical simulation based on data for the previous 12 months.

VaR is calculated assuming a one-day holding period and an expected tail-loss methodology which approximates a 95% confidence level. These VaR results are reported to senior management, the Firm Board of Directors and regulators.

JPMCB Jhb applies the Firm-wide approach for VaR as described above, for internal risk management purposes.

JPMCB Jhb uses the standardised approach to calculate market risk capital requirement for local regulatory reporting and compliance requirements.

Stress testing

Along with VaR, stress testing is an important tool to assess risk. While VaR reflects the risk of loss due to adverse changes in markets using historical market behavior, stress testing reflects the risk of loss from hypothetical changes in the value of market risk sensitive positions applied simultaneously.

The Firm and JPMCB Jhb run weekly stress tests on market-related risks across the lines of business using multiple scenarios that assume significant changes in risk factors such as credit spreads, equity prices, interest rates, currency rates or commodity prices.

The Firm and JPMCB Jhb use a number of standard scenarios that capture different risk factors across asset classes including geographical factors, specific idiosyncratic factors and extreme tail events. The stress testing framework calculates multiple magnitudes of potential stress for both market rallies and market sell-offs for each risk factor and combines them in multiple ways to capture different market scenarios. The flexibility of the stress testing framework allows risk

managers to construct new, specific scenarios that can be used to form decisions about future possible stress events.

Stress-test results, trends and qualitative explanations based on current market risk positions are reported to the respective Line of Business ("LOB"), Firm and JPMCB Jhb senior management as appropriate, to allow them to better understand the sensitivity of positions to certain defined events and to enable them to manage their risks with more transparency.

Stress scenarios are defined and reviewed by Market Risk Management, and significant changes are reviewed by the relevant LOB Risk Committees and may be redefined on a periodic basis to reflect current market conditions.

Other non-statistical

Aside from VaR and stress testing, other specific risk measures, such as, but not limited to, credit spread sensitivities, net open positions, basis point values, option sensitivities, are also utilised within specific market context and aggregated across businesses.

JPMCB Jhb utilises non-statistical risk measures such as but not limited to, FX Delta and IR Delta, to measure and monitor risk.

Limits

Market risk limits are employed as the primary control to align the Firm's and JPMCB Jhb's market risk with certain quantitative parameters within the Firm's and JPMCB Jhb's Risk Appetite framework, respectively.

Market Risk Management sets limits and regularly reviews and updates them as appropriate, at least semi-annually, with any changes approved by Firm or LOB or JPMCB Jhb management, as appropriate, and Market Risk Management. Limits that have not been reviewed within a specified time period by Market Risk Management are reported to senior management.

Limit breaches are required to be reported in a timely manner to limit approvers, which include Market Risk Management and senior management. In the event of a limit breach, Market Risk Management consults with senior management to determine the course of action required to return to compliance, which may include as a reduction in risk or granting a temporary increase in limits to accommodate an expected increase in client activity and/or market volatility. Certain Firm, LOB or JPMCB Jhb level limits that have been breached are escalated as appropriate

JPMCB Jhb's limits include VaR, Stress and non-statistical limits established for the legal entity:

Appropriate Business area representatives and Market Risk representatives are signatories to these limits

Risk reporting

The Firm and JPMCB Jhb have their own set of regular market risk reports, which include daily notification of limit utilizations and limit breaches, and where applicable, granular market risk metrics which provide transparency into potential risk concentrations.

Market risk capital requirements

JPMCB Jhb has adopted the standardised approach for calculating the regulatory market risk capital requirements for the Prudential Authority.

**Market risk capital requirements weighted exposure as at
31 December**

(R millions)	2023	2022
Interest rate risk	1,185	873
Foreign exchange net open position	479	1,367
Total	1,664	2,240

10. Operational risk (Table ORA)

Operational risk management

Operational risk is the risk of an adverse outcome resulting from inadequate or failed internal processes or systems; human factors; or external events impacting the Firm's processes or systems. Operational Risk includes compliance, conduct, legal, and estimations and model risk. Operational risk is inherent in the Firm's activities and can manifest itself in various ways, including fraudulent acts, business disruptions (including those caused by extraordinary events beyond the Firm's control) cyber-attacks, inappropriate employee behaviour, failure to comply with applicable laws, rules and regulations or failure of vendors or third party providers to perform in accordance with their agreements. Operational Risk Management attempts to manage operational risk at appropriate levels in light of the Firm's financial position, the characteristics of its businesses, and the markets and regulatory environments in which it operates.

Operational Risk Management Framework

The Firm's Compliance, Conduct, and Operational Risk ("CCOR") Management Framework is designed to enable the Firm to govern, identify, measure, monitor and test, manage and report on the Firm's operational risk.

Operational Risk Governance

The LOBs and Corporate are responsible for the management of operational risk. The Control Management Organization, which consists of control managers within each LOB and Corporate, is responsible for the day-to-day execution of the CCOR Framework.

The Firm's Global Chief Compliance Officer ("CCO") and Firmwide Risk Executive ("FRE") for Operational Risk and Qualitative Risk Appetite is responsible for defining the CCOR Management Framework and establishing the minimum standards for its execution. The LOB and Corporate aligned CCOR Lead Officers report to the Global CCO and FRE for Operational Risk and Qualitative Risk Appetite and are independent of the respective businesses or functions they oversee. The CCOR Management Framework is included in the Risk Governance and Oversight Policy that is reviewed and approved by the Board Risk Committee periodically.

Operational Risk Identification

The Firm utilizes a structured risk and control self-assessment process that is executed by the LOBs and Corporate. As part of this process, the LOBs and Corporate evaluate the effectiveness of their respective control environment to assess circumstances in which controls have failed, and to determine where remediation efforts may be required. The Firm's Operational Risk and Compliance organization ("Operational Risk and Compliance") provides oversight of and challenge to these evaluations and may also perform independent assessments of significant operational risk events and areas of concentrated or emerging risk.

Operational Risk Measurement

Operational Risk and Compliance performs an independent assessment of the operational risks inherent within the LOBs and Corporate, which includes evaluating the effectiveness of the control environments and reporting the results to senior management.

In addition, Operational Risk and Compliance assesses operational risks through quantitative means, including operational risk-based capital and estimation of operational risk losses under both baseline and stressed conditions.

The primary component of the operational risk-based capital estimate is the Loss Distribution Approach (“LDA”) statistical model, which simulates the projected frequency and severity of operational risk losses based on historical data. The LDA model is used to estimate an aggregate operational risk loss over a one-year time horizon, at a 99.9% confidence level. The LDA model incorporates actual internal operational risk losses in the quarter following the period in which those losses were realized, and the calculation generally continues to reflect such losses even after the issues or business activities giving rise to the losses have been remediated or reduced.

As required under the Basel III capital framework, the Firm’s operational risk capital methodology, which uses the Advanced Measurement Approach (“AMA”), incorporates internal and external losses as well as management’s view of tail risk captured through operational risk scenario analysis, and evaluation of key business environment and internal control metrics. The Firm does not reflect the impact of insurance in its AMA estimate of operational risk capital.

The Firm considers the impact of stressed economic conditions on operational risk losses and develops a forward-looking view of material operational risk events that may occur in a stressed environment. The Firm’s operational risk stress testing framework is utilized in calculating results for the Firm’s CCAR and other stress testing processes.

Operational Risk Monitoring and testing

The results of risk assessments performed by Operational Risk and Compliance are used in connection with their independent monitoring and testing compliance of the LOBs and Corporate with laws, rules and regulations. Through monitoring and testing, Operational Risk and Compliance independently identify areas of heightened operational risk and tests the effectiveness of controls within the LOBs and Corporate.

Management of Operational Risk

The operational risk areas or issues identified through monitoring and testing are escalated to the LOBs and Corporate to be remediated through action plans, as needed, to mitigate operational risk. Operational Risk and Compliance may advise the LOBs and Corporate in the development and implementation of action plans.

Operational Risk Reporting

All employees of the Firm are expected to escalate risks appropriately. Risks identified by Operational Risk and Compliance are escalated to the appropriate LOB and Corporate Control Committees, as needed. Operational Risk and Compliance has established standards designed to ensure that consistent operational risk reporting and operational risk reports are produced on a Firmwide basis as well as by the LOBs and Corporate. Reporting includes the evaluation of key risk and performance indicators against established thresholds as well as the assessment of different types of operational risk against stated risk appetite. The standards establish escalation protocols to senior management and to the Board of Directors.

JPMCB Jhb operational risk overview

JPMCB Jhb adheres to the firm-wide Compliance, Conduct and Operational Risk Management Framework.

The Branch has one dedicated Location Control Manager (“LCM”). The LCM forms part of the business reporting into the Control Management organisation and supports the business in the execution of the CCOR framework at the location level in the region.

A Location Operational Risk and Control Committee (“LORCC”) is in place as a forum where Senior Managers discuss operational risks and supervise the control environment of each line of business operating in South Africa. Committee members review metrics that indicate soundness of their operational risk processes. The LORCC is a delegated committee of the SA LMC and issues raised at the LORCC are escalated to the SA LMC as appropriate.

JPMCB Jhb operational risk capital measurement

JPMCB Jhb calculates the Operational Risk Capital Requirement (ORCR) for Pillar 1 using the Basic Indicator Approach (“BIA”). The Pillar 1 assessment of Operational risk is calculated in accordance with the BIA under Basel 3. This approach calculates operational risk capital using a single indicator as a proxy for an institution’s overall operational risk exposure—referred to as the “relevant indicator”.

The relevant indicator is the sum of JPMCB Jhb’s net interest income and its net non-interest income before the deduction of any provisions and operating expenses. The Operational Risk Capital Requirement under the BIA is equal to 15% of the average over the previous 3 years of the relevant indicator. If the relevant indicator for a given year is negative, it is excluded from both the numerator and denominator when calculating the average.

On instructions from the PA, a 3% capital requirement is added to Pillar 1 leading total Operational risk RWA to an equivalent of 18% of the relevant indicator.

Operational risk weighted exposure as at 31 December

(R millions)	2023	2022
Operational risk	2,935	2,606

11. Liquidity risk (Table LIQA)

Liquidity risk is the risk that the JPMCB Jhb will be unable to meet contractual and contingent financial obligations as they arise or there not being an appropriate amount, composition and tenor of funding and liquidity to support its assets and liabilities.

JPMCB Johannesburg liquidity and funding management is integrated into JPMorgan Chase & Co.'s (the Firm's) liquidity management framework.

Liquidity risk management

The Liquidity Risk Management (LRM) function is the firm's independent second line of defence. Its primary objective is to provide independent oversight of liquidity risk across the Firm. LRM's responsibilities include, but are not limited to:

- Defining, monitoring and reporting liquidity risk metrics.
- Independently establishing and monitoring limits and indicators, including liquidity risk appetite.
- Developing a process to classify, monitor and report limit breaches.
- Performing an independent review of liquidity risk management processes to evaluate their adequacy and effectiveness based on LRM's Independent Review Framework.
- Monitoring and reporting internal firmwide and legal entity liquidity stress tests regulatory defined liquidity metrics, as well as liquidity positions, balance sheet variances and funding activities.
- Approving or escalating for review new or updated liquidity stress assumptions

Liquidity management

TCIO is responsible for liquidity management. The primary objectives of the Firm's liquidity management are per the following:

- Ensure that the Firm's core businesses and material legal entities are able to operate in support of client needs and meet contractual and contingent financial obligations through normal economic cycles as well as during stress events and
- Manage an optimal funding mix and availability of liquidity sources.

These objectives are addressed through:

- Analysing and understanding the liquidity characteristics of the assets and liabilities of the Firm, lines of business and legal entities, taking into account legal, regulatory, and operational restrictions.
- Developing internal liquidity stress testing assumptions;
- Defining and monitoring firmwide and legal entity specific liquidity strategies, policies, reporting and contingency funding plans;
- Managing liquidity within the Firm's approved liquidity risk appetite tolerances and limits;
- Managing compliance with regulatory requirements related to funding and liquidity risk; and
- Setting Funds Transfer Pricing (FTP) in accordance with underlying liquidity characteristics of balance sheet assets and liabilities as well as certain off-balance sheet items.

As part of the Firm's overall liquidity management strategy, the Firm manages liquidity and funding using a centralised, global approach designed to:

- Optimize liquidity sources and uses;
- Monitor exposures;
- Identify constraints on the transfer of liquidity between legal entities; and
- Maintain the appropriate amount of surplus liquidity at a firmwide and legal entity level

Governance

The firm has established and implemented strategies, policies and procedures to effectively manage liquidity risk at the Firmwide, legal entity and LOB levels. The specific risk committees responsible for liquidity risk governance include the Board Risk Committee, Firmwide ALCO and CTC Risk Committee, as well as risk committees and ALCOs of regions, legal entities and LOBs.

The CTC Risk Committee (RC), which is co-chaired by JPMC Chief Financial Officer (CFO) and CTC CRO is the governing committee and escalation channel to the FRC for the oversight of firmwide liquidity risk. The CTC RC reviews:

- Amendments made to the liquidity risk stress testing assumptions used within the firm's Quantitative Risk Appetite Framework.
- Stress practices, methodologies, assumptions, and results used within liquidity risk stress tests that are part of the firm's Quantitative Risk Appetite Framework on a quarterly basis.
- The size and composition of the liquidity buffer
- The firm's compliance with liquidity risk limits on a quarterly basis
- A summary of the independent reviews evaluating the adequacy and effectiveness of the firm's liquidity risk management processes on an annual basis.

The firm's Liquidity Risk Management Policy specifies overall principles for the firm's approach to liquidity risk management. This policy establishes the requirements to assess, measure, monitor and control liquidity risk. Liquidity risk limits and indicators are governed by the firmwide Liquidity Risk Limits and Indicators Standard, which is approved by the CTC CRO.

Liquidity risk limits and indicators

Liquidity risk limits and indicators are governed by the firmwide Liquidity Risk Limits and Indicators Standard, which is approved by the CTC CRO.

Limits are defined as internal risk metrics, used as the primary controls that aim to restrict the amount of liquidity risk or balance sheet exposure across the firm such that the Firm's liquidity position is maintained and is aligned with the Firm's quantitative risk appetite, as determined by the firm's senior management. Limit breaches require Corporate Treasury to actively direct LOBs or take steps to bring utilisation within limits.

Indicators serve as early warning signals of changes within market or counterparty/customer behaviour. Indicator breaches require a prompt assessment of the current and/or potentially changing liquidity status for the firm, region or LOB.

Internal stress testing

Liquidity stress tests are intended to ensure that there is sufficient liquidity under a variety of adverse scenario, including scenarios analysed as part of the Firm's resolution and recovery planning.

Liquidity stress scenarios are produced for JPMorgan Chase & Co. ("Parent Company") and the Firm's material legal entities on a regular basis, and other stress tests are performed, in response to specific market events or concerns. Liquidity stress tests assume contractual financial obligations are met and take into consideration:

Varying levels of access to unsecured and secured funding markets,

Estimated non-contractual and contingent cash outflows,

Collateral haircuts, and

Potential impediments to the availability and transferability of liquidity between jurisdictions and material legal entities such as regulatory, legal or other restrictions

Liquidity outflow assumptions are modelled across a range of time horizons and currency dimensions and contemplate both market and idiosyncratic stress.

The results of stress tests are considered in the formulation of the funding plan and assessment of its liquidity position. Liquidity is maintained at levels sufficient to comply with liquidity risk tolerances and minimum liquidity requirements, and to manage through periods of stress when access to normal funding sources may be disrupted

Contingency funding plan

The Firm's Contingency Funding Plan ("CFP") sets out strategies for addressing and managing liquidity through liquidity stress events incorporating liquidity risk limits, indicators and risk appetite tolerances that make up Liquidity Escalation Points ("LEP"). The CFP identifies the alternative contingent funding and liquidity resources available in a period of stress, including on a legal entity basis via CFP addendums. JPMCB Jhb's addendum to the CFP is reviewed and approved by the SA ALCO and by JPMCB Jhb Branch Oversight Committee annually.

JPMorgan Chase Bank, N.A. Johannesburg ("JPMCB Jhb")

The South African Asset and Liability Committee ("SA ALCO") is responsible for reviewing the liquidity risk profile of JPMCB Jhb.

JPMCB Jhb is subject to the PA's liquidity regulations.

Liquidity Coverage Ratio (LCR)

Per the directives issued by the PA, the LCR is a prudential requirement with a minimum requirement of 100%.

The LCR is intended to measure the amount of "high quality liquid assets" ("HQLA") held by the Branch in relation to estimated net cash outflows within a 30-day period during an acute stress event.

The Branch did not breach its LCR limit or indicator during 2023.

Net stable funding ratio (NSFR)

NSFR aims to promote resilience over a longer time horizon by creating incentives for banks to fund their activities with more stable sources of funding on an ongoing basis.

Per PA Directive 8 of 2017 the NSFR became a minimum applicable liquidity requirement from 1 January 2018, reportable on a monthly basis within 20 business days immediately following the reportable month end.

The Branch did not breach its NSFR limit or indicator during 2023.

Liquid asset requirement

Under the PA liquidity requirements, JPMCB Jhb holds certain unencumbered high quality, liquid assets that are available to raise liquidity if required.

The Branch did not breach its liquid asset requirement during 2023.

12. Interest rate risk in the banking book (“IRRBB”) (table IRRBBA)

Firm-wide

Interest rate risk in the banking book

Interest Rate Risk in the Banking Book (IRRBB) is defined as interest rate risk resulting from the firm's traditional banking activities (accrual accounted on and off-balance sheet positions) which include the extension of loans and credit facilities, taking deposits and issuing debt (collectively referred to as 'non-trading' activities); and also the impact from Treasury and Chief Investment Office (T/CIO) investment securities portfolio and other related T/CIO activities. IRR from non-trading activities can occur due to a variety of factors, including but not limited to:

- Difference in the timing of re-pricing of assets, liabilities and off-balance sheet instruments;
- Differences in the balances of assets, liabilities and off-balance sheet instruments that re-price at the same time;
- Differences in the amounts by which short-term and long-term market interest rates change; and
- Impact of changes in the duration of various assets, liabilities or off-balance sheet instruments as interest rates change

Governance

Governance for Firmwide IRR is defined in the IRR Management policy which is approved by CTC CRO. The CIO, Treasury and Other Corporate Risk Committee (CTC RC) is the governing committee with respect to IRRBB. The CTC RC is responsible for, but not limited to:

- Reviewing the IRR Management policy
- Reviewing the IRR profile of the firm and adherence to limits
- Reviewing significant changes to IRR models and/or assumptions; and
- Providing Governance on legal entity related exposures

IRR exposures, significant models and/or assumptions including the changes are reviewed by Firmwide ALCO. The ALCO provides a framework for overseeing the IRR of LOBs, foreign jurisdictions and key legal entities to appropriate LOB ALCOs, Country ALCOs and other local governance bodies

In addition, oversight of structural interest rate risk is managed through IRR Management, an independent risk management function reporting to the CTC CRO.

IRR Management is responsible for, but not limited to, :

- Establishing and monitoring metrics to manage interest rate risk, which may include, but are not limited to Earnings at Risk, Duration of Equity, Economic Value Sensitivity;
- Defining and monitoring interest rate risk limits; signatories to limits include representatives from both the first and second lines of defence;
- Developing a process to classify, monitor and report limit breaches;
- Performing independent review of the firm's interest rate risk activities;
- Creating and maintaining governance over interest rate risk assumptions;
- Overseeing interest rate risk of LOBs net of Funds Transfer Pricing; and

- Providing independent oversight and governance for IRR assumptions

Risk identification and measurement

Treasury and Chief Investment Office (T/CIO) manages interest rate risk exposure on behalf of the Firm by identifying, measuring, modelling and monitoring Firmwide interest rate risk. The office identifies and understands material balance sheet impacts of new initiatives and products and executes market transactions to manage interest rate risk through its investment portfolio positions. Execution is based on parameters established by senior management, per the Investment Policy. Lines of businesses are responsible for developing and monitoring the appropriateness of LOB specific interest rate risk modelling assumptions. The Funds Transfer Pricing policy provides a framework to transfer interest rate risk from LOBs to T/CIO.

Measures to monitor and manage IRR include:

- Earnings-at-Risk (EaR): Primary metric used to gauge the firm's shorter term interest rate risk exposure is Earnings at Risk (EaR), or the sensitivity of pre-tax net interest income and interest rate sensitive fees to changes in interest rates over a rolling 12 months compared to a base scenario;
- Duration of Equity (DoE): Primary metric used to determine the firm's long-term exposure to interest rate changes. DoE is calculated by measuring the change in the discounted value of asset, liability, and off-balance sheet cash-flows for a 100 basis point change in interest rates, divided by the book value of equity;
- Economic Value Sensitivity (EVS): EVS is an additional Firmwide metric utilized to determine changes in Economic Value of Equity (EVE) due to changes in interest rates. EVE sums the present value of expected future cash-flows across the firm's balance sheet

Additional scenario analysis, including Firmwide Stress Initiative (FSI) scenarios and bespoke scenarios, will also be run, as required

Limits

The independent International Asset Liability Management ("IALM") Risk function is responsible for oversight of IRR. The function's responsibilities include the identification, measurement and monitoring of IRR, including establishing and monitoring IRR Limits. IALM Risk periodically reviews/updates the limits as appropriate.

IRR limits are established for Economic Value Sensitivity ("EVS")/Equity (15%) and Earnings-at-Risk ("EaR") (R750m) metrics for JPMCB Jhb.

JPMCB Jhb

JPMCB Jhb banking book's interest rate risk is managed by the Branch Treasurer supported by Corporate Treasury which manages to the Firm wide policies on interest rate risk management.

Impact of a 2% parallel rate shock on Net interest Income (NII) including derivative instruments as at 31 December

(R millions)	2023	2022
Interest rate increase	-	(33)

including derivative instruments as at 31 December**

(R millions)	2023	2022
Interest rate increase	650	-
Interest rate decrease	(650)	-

BA300 earnings at risk increased as a result of the 2% increase in the ZAR shock following the go-live of IRRBB on 01 January 2023.

13. Remuneration disclosures (Table REMA)

Background

This section sets out the remuneration disclosures required in relation to JPMCB Jhb and in respect of the remuneration period ("Performance Year") ending 31 December 2023.

This disclosure sets out general principles. Details of specific remuneration programmes are set forth in the relevant plan terms and conditions as in force from time to time.

Qualitative disclosures

As part of the Firm, JPMCB Jhb applies J.P. Morgan's global compensation practices and principles. The qualitative remuneration disclosures required under the Basel Pillar 3 standards in respect of all employees of the Firm's businesses operating in EMEA, including staff of JPMCB Jhb, is available in the most recent EMEA Remuneration Policy Disclosure at: <http://investor.shareholder.com/jpmorganchase/basel.cfm>.

Additional qualitative disclosures specific to JPMCB Jhb

The South African regulations do not include guidance on, or a definition of, "material risk taker" ("MRTs") or "Senior Management". For the purposes of this disclosure, JPMCB Jhb has identified:

Ten members of the Branch as "Senior Management" being those employees that comprise its Branch Oversight Committee

Two further employees of the Branch as "Other Material Risk Takers" on the basis of their role (in particular their regulatory designation) and total compensation level

Quantitative disclosures

The prescribed disclosures in relation to these two groups are set out in the Appendices as follows:

Appendix D: Remuneration awarded during the financial year

Appendix E: Special payments

Appendix F: Analysis of deferred remuneration

In preparation of these disclosures, JPMCB Jhb has taken into account its size, in particular the number of individuals identified as "Senior Management" and "Other Material Risk Takers" for the purposes of this disclosure. In light of these considerations, JPMCB Jhb concluded that it was appropriate to aggregate the compensation information for these groups. Where compensation was denominated in currencies other than ZAR, the annual average FX rate has been used for the purposes of these disclosures (18.44 ZAR : 1 USD). Note that 2022 figures have not been restated.

Table CCA: Main features disclosure template (annual)

**Name of bank/controlling company: JPMorgan Chase Bank, N.A
Johannesburg Branch**

Year ended: 2023-12-31

Deferred and retained remuneration (ZAR '000)	Total amount of outstanding deferred remuneration as at 31 December 2023	Of which: Total amount of outstanding deferred and retained remuneration exposed to ex post explicit and/or implicit adjustment ¹	Total amount of amendment during the year due to ex post explicit adjustments	Total amount of amendment during the year due to ex post implicit adjustments ²	Total amount of deferred remuneration paid out in 2023
Cash					
Shares	63,965	63,965		13,338	(19,694)
Cash-linked instruments					
Other					
Total	63,965	63,965		13,338	(19,694)

1. All awards of deferred variable compensation are subject to malus and clawback provisions as set out in the most recent EMEA Remuneration Policy Disclosure, as referenced above.

2. All awards of deferred variable compensation have been made in Restricted Stock Units and so their value fluctuates with the value of the Firm's stock.

Template LIQ1: Liquidity coverage ratio for the quarter ended 31 December 2023 (quarterly)

(R millions)		Total unweighted ¹ value (daily average October to December 2023)	Total weighted ² (daily average October to December 2023)
High quality liquid assets			
1	Total high-quality liquid assets (HQLA)		19,668
Cash outflows			
2	Retail deposits and deposits from small business customers, of which:		
3	Stable deposits	-	
4	Less stable deposits	-	
5	Unsecured wholesale funding, of which:	9,187	3,459
6	Specified term deposit with residual maturity greater than 30 days	1,117	-
7	Operational deposits (all counterparties) and deposits in networks of cooperative banks		
8	Non-operational deposits (all counterparties)	8,070	3,459
9	Unsecured debt		
10	Secured wholesale funding	2,570	
11	Additional requirements, of which:	6,663	4,795
12	Outflows related to derivative exposures and other collateral requirements	4,197	4,197
13	Outflows related to loss of funding on debt products	-	-
14	Credit and liquidity facilities	-	-
15	Other contractual funding obligations	12	1
16	Other contingent funding obligations	2,455	597
17	Total cash outflows		8,254
18	Secured lending (e.g. reverse repos)	17,171	-
19	Inflows from fully performing exposures	-	-
20	Other cash inflows	18,304	18,216
21	Total Cash Inflows		18,216
Total adjusted³ value			
22	Total HQLA		19,668
23	Total net cash outflows		2,064
24	Liquidity coverage ratio (%)		953.15%

Unweighted values must be calculated as outstanding balances maturing or callable within 30 days (for inflows and outflows).

Weighted values must be calculated after the application of respective haircuts (for HQLA) or inflow and outflow rates (for inflows and outflows).

Adjusted values must be calculated after the application of both (i) haircuts and inflow and outflow rates and (ii) any applicable caps (i.e. cap on level 2B and Level 2 assets for HQLA and cap on inflows).

Template KM1: Key prudential metrics at 31 December 2023 (quarterly)

No transitional arrangement with regards implementation of IFRS 9 for the impact of expected credit loss accounting on regulatory capital have been applied.

3	Off-balance sheet exposures	0	3,035	1	3,034
4	Total	0	27,736	17	27,719

Definitions

Gross carrying values: On- and off-balance sheet items that give rise to a credit risk exposure according to the Basel framework. On-balance sheet items include loans and debt securities. Off-balance sheet items must be measured according to the following criteria: (a) guarantees given—the maximum amount that the bank would have to pay if the guarantee were called. The amount must be gross of any credit conversion factor (CCF) or credit risk mitigation (CRM) techniques. (b) Irrevocable loan commitments—total amount that the bank has committed to lend. The amount must be gross of any CCF or CRM techniques. Revocable loan commitments must not be included. The gross value is the accounting value before any allowance/impairments but after considering write-offs. Banks must not take into account any credit risk mitigation technique.

Write-offs for the purpose of this template are related to a direct reduction of the carrying amount when the entity has no reasonable expectations of recovery.

Defaulted exposures: Banks should use the definition of default that they also use for regulatory purposes. Banks must provide this definition of default in the accompanying narrative.

Non-defaulted exposures: Any exposure not meeting the above definition of default.

Allowances/impairments: Total amount of impairments, made via an allowance against impaired and not impaired exposures (may correspond to general reserves in certain jurisdictions or may be made via allowance account or direct reduction—direct write-down in some jurisdictions) according to the applicable accounting framework.

Net values: Total gross values less allowances/impairments

Template CR2: Changes in stock of defaulted loans and debt securities as at 31 December 2023 (semi-annual)

		a
		(R millions)
1	Defaulted loans and debt securities as at end of previous reporting period	0
2	Loans and debt securities that have defaulted since the last reporting period	0
3	Returned to non-defaulted	0
4	Amounts written off	0
5	Other changes	0
6	Defaulted loans and debt securities at end of reporting period (1+2-3-4±5)	0

2	Debt securities	3,489	0	0	0	0	0	0
3	Total	24,685	0	0	0	0	0	0
4	Of which defaulted	0	0	0	0	0	0	0

Definitions

Exposures unsecured—carrying amount: Carrying amount of exposures (net of allowances/impairments) that do not benefit from a credit risk mitigation technique.

Exposures secured by collateral: Carrying amount of exposures (net of allowances/ impairments) partly or totally secured by collateral, regardless of what portion of the original exposure is secured.

Exposures secured by collateral—of which secured amount: Amounts of the exposure portions, which are secured by collateral. Where the value of the collateral (meaning the amount that the collateral can be settled for) exceeds the value of the exposure, the bank must report the exposure amount (i.e. it does not report the over-collateralisation).

Exposures secured by financial guarantees: Carrying amount of exposures (net of allowances/impairments) partly or totally secured by financial guarantees, regardless of what portion of the original exposure is guaranteed.

Exposures secured by financial guarantees—of which secured amount: Amounts of the exposure portions, which are covered by the financial guarantee. Where the value of the guarantee (amount that can be obtained if the guarantee is called) is above the amount of the exposure, the bank must report the amount of the exposure, i.e. not to report the excess value.

Exposures secured by credit derivatives: Carrying amount of exposures (net of allowances/impairments) partly or totally secured by credit derivatives, regardless of what portion of the original exposure is secured.

Exposures secured by credit derivatives—of which secured amount: Amounts of the exposure portions which are secured by the credit derivatives. Where the value of the credit derivative (amount that the credit derivative can be settled for) is above the amount of the exposure, the bank must report the amount of the exposure, i.e. not to report the excess value.

Definitions

Total credit exposure amount (post-CCF and CRM): The amount used for the capital requirements calculation (both for on- and off-balance sheet amounts), therefore net of allowances and write-offs and after having applied CRM techniques and CCF but before the application of the relevant risk weights.

Past-due loans: Past-due loans correspond to the unsecured portion of any loan past due for more than 90 days, as defined in paragraph 75 of the Basel framework.

Higher-risk categories: Banks must include in this row the exposures included in paragraphs 79 and 80 of the Basel framework that are not included in other regulatory portfolios (e.g. exposure weighted at 150% or higher risk weight reflecting the higher risks associated with these assets). Exposures reported in this row should not be reported in the rows above. From 1 January 2017 when the Banks' equity investments in funds framework enters into force, corresponding requirements must not be reported in this template but only in OV1.

Equity investments in funds: Will become applicable from 1 January 2017 when the corresponding framework enters into force.

Other assets: Refers to assets subject to specific risk weight set out by paragraph 81 of the Basel framework and to significant investment in commercial entities that receive a 1250% risk-weight according to paragraph 90, fourth bullet, of Basel III.

Standardised approach (SA-CCR) for measuring exposure at default for counterparty credit risk will be applicable from 1 October 2019. Before it enters into force, banks should report in row 1 information corresponding to the Current Exposures Method and the Standardised Method which will become obsolete once the SA-CCR enters into force; see BCBS, March 2014, The standardised approach.

Definitions

Replacement Cost (RC): For trades that are not subject to margining requirements, the RC is the loss that would occur if a counterparty were to default and was closed out of its transactions immediately. For margined trades, it is the loss that would occur if a counterparty were to default at present or at a future date, assuming that the closeout and replacement of transactions occur instantaneously. However, closeout of a trade upon a counterparty default may not be instantaneous. The replacement cost under the Current Exposure Method is described under the Basel framework, Annex 4, paragraph 92(i). The replacement cost under the standardised approach for measuring counterparty credit risk exposures is described in the standardised approach for measuring counterparty credit risk exposures (see footnote 18).

Potential Future Exposure is any potential increase in exposure between the present and up to the end of the margin period of risk. The potential future exposure for the Current Exposure Method is described in Basel framework, Annex 4, paragraph 92(i). The potential future exposure for the standardised approach is described in the standardised approach for measuring counterparty credit risk exposures.

Effective Expected Positive Exposure (EEPE) is the weighted average over time of the effective expected exposure over the first year, or, if all the contracts in the netting set mature before one year, over the time period of the longest-maturity contract in the netting set where the weights are the proportion that an individual expected exposure represents of the entire time interval (see Annex 4, paragraph 2E).

EAD post-CRM: exposure at default. This refers to the amount relevant for the capital requirements calculation having applied CRM techniques, credit valuation adjustments according to paragraph 9 of Annex 4 (as supplemented by Basel III in paragraph 105) and specific wrong-way adjustments (see Annex 4, paragraph 58).for measuring counterparty credit risk exposures, accessible at <http://www.bis.org/publ/bcbs279.htm>.

1	VaR component (including the 3x multiplier)	0
2	Stressed Var component (including the 3x multiplier)	0
3	All portfolios subject to the Standardised CVA capital charge	11,233
4	Total subject to the CVA capital charge	11,233

Definitions

Advanced CVA capital charge: The amount of the advanced capital charge calculated according to paragraphs 98–103 of Annex 4 of the Basel framework.

Standardised CVA capital charge: The amount of the standardised capital charge calculated according to paragraph 104 of Annex 4 of the Basel framework or with the definition provided in domestic regulation if use of external credit ratings is not permitted.

EAD post-CRM: Exposure at default. This refers to the amount used for the capital requirements calculation. It is therefore the amount of the credit valuation adjustments according to paragraph 9 of Annex 4 of the Basel framework (as supplemented by Basel III in its paragraph 105) and of the specific wrong-way adjustments (see Annex 4, paragraph 58), having applied CRM techniques.
