Hypothetical Payout Profile*

*Assumes a call premium for each call date equal to the minimum call premium for that call date

If the securities are not automatically called and the ending price is less than the threshold price, you will have 1-to-1 downside exposure to the decrease in the price of the Underlying Stock in excess of the buffer amount, and you will lose some, and possibly up to 85%, of the principal amount of your securities at maturity.

Any positive return on the securities will be limited to the applicable call premium, even if the stock closing price of the Underlying Stock on the applicable call date significantly exceeds the starting price. You will not participate in any appreciation of the Underlying Stock beyond the applicable call premium.
